

The background of the entire image is a detailed painting of a mammoth's head and tusks. The mammoth is depicted in a naturalistic style, with its head resting on the ground. The tusks are long and curved, showing a textured surface. The surrounding environment includes green grass, brown soil, and some small plants. The overall color palette is dominated by earthy tones like browns, greens, and blues.

The Call Of Distant Mammoths Why The Ice Age Mammals Disappeared:

The Call of Distant Mammoths Peter D. Ward, 1997-04-01 To help us understand what happened during the Ice Age Peter Ward takes us on a tour of other mass extinctions through earth's history. He presents a compelling account of the great comet crash that killed off the dinosaurs and describes other extinctions that were even more extensive. In so doing he introduces us to a profound paradigm shift now taking place in paleontology rather than arising from the gradual workings of everyday forces: all mass extinctions are due to unique catastrophic events. Written with an irresistible combination of passion and expertise, *The Call of Distant Mammoths* is an engaging exploration of the history of life and the importance of humanity as an evolutionary force. Carefully argued, an intelligent and compelling book. **THE OLYMPIAN SEATTLE WASHINGTON** Ward deftly summarizes a large body of scientific literature, simplifying complex ideas for the general reader without

condescension. **PUBLISHERS WEEKLY** Did the overkill really happen? Peter Ward deftly summarizes the arguments. Ward tells the story well. **THE NEW SCIENTIST**

The Call of Distant Mammoths Peter D. Ward, 2012-12-06 Just 12 000 years ago at the height of the last Ice Age, saber-toothed tigers, giant ground sloths, camels, hippos, and the great herds of proboscideans, giant mastodons, and mammoths, extinct relatives of the elephant, roamed the land where skyscrapers now stand. Why are these splendid creatures no longer with us? This compelling book explores the reasons for these extinctions and provides a tour of mass extinctions throughout earth's history, including the great comet crash that killed off the dinosaurs. Brilliantly written, *The Call of Distant Mammoths* is an engaging exploration of the history of life and the importance of humanity as an evolutionary force.

Ecocide Franz Brosch, 2002-09-20 We live in an age of ecocide. Changes of enormous ecological significance are occurring on our planet: the ozone layer is beginning to disintegrate. Since 1970, the world's forests have almost halved. A quarter of the world's fish have been depleted. 70% of biologists believe the world is now in the midst of the fastest mass extinction of species in the planet's 4.5 billion year history. Biodiversity loss is rated as a more serious environmental problem than the depletion of the ozone layer, global warming, or pollution and contamination. How have we come to this, and what can be done to conserve our environment for the future? *Ecocide* examines the facts behind the figures to offer a disturbing account of the ecological impact that the human species has on the planet. It shows how we are wilfully destroying our world. Highlighting important countermovements who are working for ecological democracy, this unique book is essential for anyone who cares about conserving our environment for the future.

Extinctions in Near Time Ross D.E. MacPhee, Hans-Dieter Sues, 2013-11-09 Near time, an interval that spans the last 100 000 years or so of earth history, qualifies as a remarkable period for many reasons. From an anthropocentric point of view, the outstanding feature of near time is the fact that the evolution, cultural diversification, and global spread of *Homo sapiens* have all occurred within it. From a wider biological perspective, however, the hallmark of near time is better conceived of as being one of enduring repeated loss. The point is important. Despite the sense of uniqueness implicit in phrases like the biodiversity crisis, meant to convey the notion

that the present bout of extinctions is by far the worst endured in recent times substantial losses have occurred throughout near time In the majority of cases these losses occurred when and only when people began to expand across areas that had never before experienced their presence Although the explanation for these correlations in time and space may seem obvious it is one thing to rhetorically observe that there is a connection between humans and recent extinctions and quite another to demonstrate it scientifically How should this be done Traditionally the study of past extinctions has fallen largely to researchers steeped in such disciplines as paleontology systematics and paleoecology The evaluation of future losses by contrast has lain almost exclusively within the domain of conservation biologists Now more than ever there is opportunity for overlap and sharing of information

Visions of War David D. Perlmuter, 2025-09-23 *Visions of War* provides a historical survey an anatomy an interpretation and a polemic about the ways human beings have created pictures of battle and conflict from the Stone Age to the Gulf War From the dawn of time to the present from the days of mammoth hunting to the era of Scud busting pictures of war constitute the most persistent genre of images human beings have created In fact human beings are the only creatures who engage in these two activities organized violence and the making of pictorial images and the author shows how both art and war emerge from the same source the hunter's eye David D Perlmuter's *Visions of War* explores and analyzes the thirteen thousand year legacy of pictures of war from various cultures over the centuries from the Stone Age cave paintings and monumental sculpture of the ancient Near East to the art of the classical period and the Middle Ages from pre contact Mesoamerican imagery to Napoleonic propaganda and totalitarian art and on to the instantaneous images of the Gulf War

The Early Settlement of North America Gary Haynes, 2002-11-14 *The Early Settlement of North America* is an examination of the first recognisable culture in the New World the Clovis complex Gary Haynes begins his analysis with a discussion of the archaeology of Clovis fluted points in North America and a review of the history of the research on the topic He presents and evaluates all the evidence that is now available on the artefacts the human populations of the time and the environment and he examines the adaptation of the early human settlers in North America to the simultaneous disappearance of the mammoths and mastodons Haynes offers a compelling reappraisal of our current state of knowledge about the peopling of this continent and provides a significant new contribution to the debate with his own integrated theory of Clovis which incorporates vital new biological ecological behavioural and archaeological data

Prehistoric Native Americans and Ecological Change Paul A. Delcourt, Hazel R. Delcourt, 2004-07-29 This book shows that Holocene human ecosystems are complex adaptive systems in which humans interacted with their environment in a nested series of spatial and temporal scales Using panarchy theory it integrates paleoecological and archaeological research from the Eastern Woodlands of North America providing a paradigm to help resolve long standing disagreements between ecologists and archaeologists about the importance of prehistoric Native Americans as agents for ecological change The authors present the concept of a panarchy of complex adaptive cycles as applied to the development of increasingly complex

human ecosystems through time They explore examples of ecological interactions at the level of gene population community landscape and regional hierarchical scales emphasizing the ecological pattern and process involving the development of human ecosystems Finally they offer a perspective on the implications of the legacy of Native Americans as agents of change for conservation and ecological restoration efforts today

The Two-Mile Time Machine Richard B. Alley, 2014-10-26 In the 1990s Richard B Alley and his colleagues made headlines with the discovery that the last ice age came to an abrupt end over a period of only three years In *The Two Mile Time Machine* Alley tells the fascinating history of global climate changes as revealed by reading the annual rings of ice from cores drilled in Greenland He explains that humans have experienced an unusually temperate climate compared to the wild fluctuations that characterized most of prehistory He warns that our comfortable environment could come to an end in a matter of years and tells us what we need to know in order to understand and perhaps overcome climate changes in the future In a new preface the author weighs in on whether our understanding of global climate change has altered in the years since the book was first published what the latest research tells us and what he is working on next

The Fourth Source Robert J. Tuttle, 2012 This book describes how the effects of nature's own nuclear reactors have shaped the Earth the Solar System the Universe and the history of life as we know it It focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused by natural nuclear fission reactors The theory of Plate Tectonics is wrong and it is shown that expansion of the Earth causes continental drift A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as separate species are actually the result of radiation injury This view is particularly effective as applied to humans The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen These effects also explain how pterodactyls and ancient birds could fly Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed Analysis of geological and biological data supports this The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement It isn't and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars The measurements of an expanding Universe are shown to be in error and an expanding Universe is not needed by an alternative interpretation of Einstein's equations This interpretation is based on the equal creation of matter and antimatter which is known to occur Spiral galaxies are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets The Universe is not made up of 96% Dark Matter and Dark Energy but is instead very ordinary Abundant evidence and references provide support for all these interpretations This book opens new opportunities for research by correcting several fundamental errors in our

concepts of the Earth Life and the Universe **The Nature of Home** Lisa Knopp, 2004-05-01 For Lisa Knopp homesickness is a literal sickness During a lengthy sojourn away from the Nebraska prairie she fell ill and only when she decided to return home did she recover Homesickness is the triggering event for this collection of essays concerned with nothing less than what it means to feel at home Knopp writes masterfully about ecology place and the values and beliefs that sustain the individual within an impersonal world She is passionate about her subject whether it be an endangered beetle in the salt marshes near Lincoln Nebraska a forgotten Nebraska inventor a museum muralist a paleontologist or Arbor Day as the misguided attempt of Eastern settlers to correct a perceived deficiency in the Great Plains landscape Here is a writer who has read widely and judiciously and for whom everything resonates within the intricately structured definition of home
