With new authors and new chapters that address the advances and developments since the fifth edition, the book presents everything toxicologists and students need to know to understand hazards and mechanisms of toxicity, enabling them to better assess risk. The book begins with the four basic principles of toxicology: dose matters, people differ, everything transforms, and timing is crucial. The contributors discuss various agents of toxicity, including foodborne solvents, crop protection chemicals, radiation, and plant and animal toxins. They examine various methods for defining and measuring toxicity in a host of areas, including genetics, carcinogenicity, toxicity in major body systems, and the environment. This new edition contains an expanded glossary reflecting significant changes in the field. New topics in this edition include the importance of dose response, Systems toxicology, Food safety, The humane use and care of animals, Neurotoxicology. The comprehensive coverage and clear writing style make this volume an invaluable text for students and a one-stop reference for professionals. Mammalogy Terry Vaughan, James Ryan, Nicholas Czaplewski, 2011-04-21 Newly revised and extensively updated, the fifth edition of Mammalogy explains and clarifies the subject of mammalian biology as a unified whole, taking care to discuss the latest and most fascinating discoveries in the field. In recent years, we witnessed significant changes in the taxonomy of mammals. The authors kept pace with such changes and revised each chapter to reflect the most current data and statistics available. New pedagogical elements, including chapter outlines, lists of key morphological characteristics, and further reading sections, help readers grasp the most important concepts and explore additional content on their own.
