The Canal Builders The Men Who Constructed Britains Canals:

The Canal Builders Anthony Burton, 2015-11-30 Canal Builders is a classic history book for anyone interested in the development of Britain's canal system. The book, which was first published in the 1970s, is now republished here in a new fifth edition. It takes the reader from the middle of the eighteenth century to the start of the railway age in the early nineteenth century. Anthony Burton has revised and improved the original text using new material that he has found in archives since it was first published and has added many extra illustrations. This is the remarkable story of the many groups of people who were responsible for building Britain's canal system. There were industrialists such as Josiah Wedgwood who promoted canals to help his own industry and speculators who financed the projects in the hope of a good return. The work was planned by engineers, some of whom such as James Brindley and Thomas Telford have become famous, while others have remained virtually unknown but still did magnificent work. This is also the story of the great anonymous army of men who actually did the work, the navvies. This was the first book ever to study the lives of these labourers in detail. Altogether it is an epic story of how the transport route that made the industrial revolution possible was built. Well planned and well written. There is no better introduction to the early canal age. The Economist Links End Links Author End Author An Institutional Approach to the Göta kanal Björn Hasselgren, 2023-11-23 This book is based on an institutional evolutionary theoretical view to the Göta kanal. Canals were the major transport infrastructure system besides roads and maritime transport until railroads were introduced. The canal studied is the Swedish Göta kanal project during the preparation and construction phase from 1800-1832. Thus the Göta kanal and the canal era is seen from a technological, an economic and a political perspective. Comparisons are made with two contemporary major canal projects: the Erie Canal in the USA 1817-1825 and the Caledonian Canal in Britain 1804-1822. It is argued that the Göta kanal project as Sweden's Mega Project of its time represented an important development step in Sweden as regards learning and innovation and became a starting point for Swedish transport infrastructure projects in the time to come, primarily the railways. **The Wodrow-Kenrick Correspondence 1750-1810**

, 2024-12-12 This is the second volume of the Wodrow-Kenrick Correspondence 1750-1810. Reverend James Wodrow 1730-1810, minister of the Church of Scotland at Stevenston in Ayrshire, and Samuel Kenrick 1728-1811, tutor to a Renfrewshire family until 1763 and subsequently a merchant and banker in Bewdley, Worcestershire, began corresponding around 1750, soon after leaving the University of Glasgow. They continued to do so until James Wodrow's death in 1810. Their correspondence is an exceptionally rich resource for the study of British culture and society in the era of Enlightenment and revolutions, here made easily available to scholars for the first time. Samuel Kenrick lived in England from 1765 and the men only met again in 1789, so their friendship was carried out almost entirely on paper for forty-five years. The correspondence constitutes a remarkable record of a friendship. In Volume 2, 1784-1790, Wodrow and Kenrick were long established in successful careers and their daughters were now adults. A major theme in this book is Mary Kenrick's visit to Scotland to stay

with the Wodrow family in summer 1784 and Helen Nell Wodrow's return with her to Bewdley to become part of the Kenrick household until September 1785 Wodrow himself visited Bewdley on the only occasions he ever did this in early September and late October 1788 on his way to and from London to arrange for the publication of two volumes of the sermons of his mentor Principal William Leechman of Glasgow University As well as discussing family friendship and the practicalities of publishing the letters in this volume contain lively and highly readable exchanges on theology and church politics in Scotland and England university politics in Glasgow a wide range of contemporary literature and an enormous spectrum of famous and less well known politicians authors clergymen and local figures in Ayrshire and Worcestershire The Canal Builders

Anthony Burton, 2005 This revised edition is the definitive history of Britain's canals and the men who made them Anthony Burton is the acknowledged expert on British canals and has appeared on and presented many TV programmes on the subject **Life on the Canal** Anthony Burton, 2013-02-14 Life on the Canal **British Canals** Edwin A. Pratt, 2015-01-13

The appointment of a Royal Commission on Canals and Waterways which first sat to take evidence on March 21 1906 is an event that should lead to an exhaustive and most useful enquiry into a question which has been much discussed of late years but on which as I hope to show considerable misapprehension in regard to actual facts and conditions has hitherto existed Theoretically there is much to be said in favour of canal restoration and the advocates thereof have not been backward in the vigorous and frequent ventilation of their ideas Practically there are other all important considerations which ought not to be overlooked though as to these the British Public have hitherto heard very little As a matter of detail also it is desirable to see whether the theory that the decline of our canals is due to their having been captured and strangled by the railway companies a theory which many people seem to believe in as implicitly as they do say in the Multiplication Table is really capable of proof or whether that decline is not rather to be attributed to wholly different causes In view of the increased public interest in the general question it has been suggested to me that the Appendix on The British Canal Problem in my book on Railways and their Rates published in the Spring of 1905 should now be issued separately but I have thought it better to deal with the subject afresh and at somewhat greater length in the present work This I now offer to the world in the hope that even if the conclusions at which I have arrived are not accepted due weight will nevertheless be given to the important if not as I trust I may add the interesting series of facts concerning the past and present of canals alike at home on the Continent and in the United States which should still represent I think a not unacceptable contribution to the present controversy **The Canal Pioneers** Anthony Burton, 2017 This is the story of canals used for transport and the men who built them from the earliest times up to the end of the nineteenth century This is a very long history stones for the pyramids of Egypt were brought to the site by canal and one of the most imposing canal systems ever built the Grand Canal of China was begun in the sixth century BC Development after the end of the Roman Empire was slow but saw the steady improvement of river navigations through locks the mitre gates were actually first designed by Leonardo da Vinci The

modern age of canals that cross summits began in France and the most famous of these early waterways was the magnificent Canal du Midi the brainchild of Pierre Paul Riquet completed in 1681 It was a visit to this canal when he was a teenager on the Grand Tour that inspired the Duke of Bridgewater to build his famous canal that inspired a rush of canal construction in Britain Britain's canals became the essential transport route that made the country's industrial revolution possible thanks to engineers such as James Brindley William Jessop and Thomas Telford It was a period of intensive construction that lasted for fifty years from 1760 It saw many innovations from the use of cast iron for bridges and aqueducts to inclined planes and vertical lifts to move boats from one canal level to another The nineteenth century also saw extensive canal systems developing in North America such as the famous Erie Canal and culminated in two great ship canals at Suez and Panama The book tells an exciting story of canal development and the many men who made it possible

History and Government

Form 3 , *Canal 250* Anthony Burton, 2011-05-02 When a young English nobleman was thwarted in love he abandoned the court retired to his estate near Manchester and built a canal to serve his coalmines The Bridgewater Canal was the sensation of the age and led others to follow the example of the enterprising Duke of Bridgewater From his starting point in 1760 over the next half century Britain was covered by a network of waterways that became the lifeblood of the Industrial Revolution This is the story of 250 years of history on those canals and of the people who made and used them The book tells of the great engineers such as Telford Brindley and Jessop and of the industrialists such as Wedgwood and Arkwright who promoted the canals they built It also tells the story of the anonymous navvies who dug the canals the men and women who ran the boats and the workers who kept the canals running Covering the entire history of the canal network from the glorious early days through the years of decline caused by rail and then road competition up to the subsequent revival of the canals as leisure routes this wonderfully illustrated book is a must have for all canal enthusiasts
