Unmaking the Global Sweatshop Rebecca Prentice, Geert De Neve, 2017-07-31 Anthropologists and ethnographers examine the global garment industry s impact on workers well being The 2013 collapse of Rana Plaza an eight story garment factory in Savar Bangladesh killed over a thousand workers and injured hundreds more This disaster exposed the brutal labor conditions of the global garment industry and revealed its failures as a competitive and self regulating industry Over the past thirty years corporations have widely adopted labor codes on health and safety yet too often in their working lives garment workers across the globe encounter death work related injuries and unhealthy factory environments Disasters such as Rana Plaza notwithstanding garment workers routinely work under conditions that not only escape public notice but also undermine workers long term physical health mental well being and the very sustainability of their employment Unmaking the Global Sweatshop gathers the work of leading anthropologists and ethnographers studying the global garment industry to examine the relationship between the politics of labor and initiatives to protect workers health and safety Contributors analyze both the labor processes required of garment workers as well as the global dynamics of outsourcing and subcontracting that produce such demands on workers health The accounts contained in Unmaking the Global Sweatshop trace the histories of labor standards for garment workers in the global South explore recent partnerships between corporate state and civil society actors in pursuit of accountable corporate governance analyze a breadth of initiatives that seek to improve workers health standards from ethical trade projects to human rights movements and focus on the ways in which

risk health and safety might be differently conceptualized and regulated Unmaking the Global Sweatshop argues for an expansive understanding of garment workers lived experiences that recognizes the politics of labor human rights the privatization and individualization of health related responsibilities as well as the complexity of health and well being Contributors Mark Anner Hasan Ashraf Jennifer Bair Jeremy Blasi Geert De Neve Saydia Gulrukh Ingrid Hagen Keith Sandya Hewamanne Caitrin Lynch Alessandra Mezzadri Patrick Neveling Florence Palpacuer Rebecca Prentice Kanchana N Ruwanpura Nazneen Shifa Dina M Siddiqi Mahmudul H Sumon The Contradictions of Austerity Jeffrey Sommers, Charles Woolfson, 2014-04-24 The great financial crisis of 2008 and the ensuing global economic and financial turmoil have launched a search for models for recovery The advocates of austerity present the Baltic States as countries that through discipline and sacrifice showed the way out of crisis They have proposed the Baltic model of radical public sector cuts wage reductions labor market reforms and reductions in living standards for other troubled Eurozone countries to emulate Yet the reality of the Baltic austerity fix has been neither fully accepted by its peoples nor is it fully a success This book explains why and what are the real social and economic costs of the Baltic austerity model We examine each of the Baltic States by connecting national level studies within a European and global political economy thereby delivering comparative breadth that supersedes localized understandings of the crisis Thus for each of the three Baltic states individual chapters explore the different economic and social dimensions of neo liberal post communism and the subsequent wider global economic and financial crisis in which these newly financialized economies have found themselves especially vulnerable The austerity model adopted by Baltic national governments in response to the crisis reveals the profound vulnerabilities created by their unwavering commitment to liberalized economies not least in terms of the significant exit of their labor forces and consequent population loss This book looks beyond basic financial metrics claiming a success story for the Baltic austerity model to reveal the damaging economic and social consequences first of neo liberal policies adopted during transition and latterly of austerity measures based on internal devaluation Combined these policies undermine the possibility of longer term recovery and even social and economic sustainability not to mention prospects for successful integration in the now faltering European project that has departed from its Social Model roots **OECD Economic Surveys: Austria 2013** OECD, 2013-07-02 OECD s 2013 Economic Survey of Austria examines recent economic developments policies and prospects This issue s special chapters cover long term well being Engineering Ethics for a Globalized World Colleen Murphy, Paolo Gardoni, Hassan Bashir, Charles E. Harris, Jr., Eyad Masad, 2015-06-22 This volume identifies discusses and addresses the wide array of ethical issues that have emerged for engineers due to the rise of a global economy To date there has been no systematic treatment of the particular challenges globalization poses for engineering ethics standards and education This volume concentrates on precisely this challenge Scholars and practitioners from diverse national and professional backgrounds discuss the ethical issues emerging from the inherent symbiotic relationship between the engineering

profession and globalization Through their discussions a deeper and more complete understanding of the precise ways in which globalization impacts the formulation and justification of ethical standards in engineering as well as the curriculum and pedagogy of engineering ethics education emerges The world today is witnessing an unprecedented demand for engineers and other science and technology professionals with advanced degrees due to both the off shoring of western jobs and the rapid development of non Western countries The current flow of technology and professionals is from the West to the rest of the world Professional practices followed by Western or Western trained engineers are often based on presuppositions which can be in fundamental disagreement with the viewpoints of non Westerners A successful engineering solution cannot be simply technically sound but also must account for cultural social and religious constraints For these reasons existing Western standards cannot simply be exported to other countries Divided into two parts Part I of the volume provides an overview of particular dimensions of globalization and the criteria that an adequate engineering ethics framework must satisfy in a globalized world Part II of the volume considers pedagogical challenges and aims in engineering ethics education that is global in character
