Soft Computing And Intelligent Systems Theory And Applications:

Soft Computing and Intelligent Systems Madan M. Gupta, 1999-10-28 The field of soft computing is emerging from the cutting edge research over the last ten years devoted to fuzzy engineering and genetic algorithms The subject is being called soft computing and computational intelligence With acceptance of the research fundamentals in these important areas the field is expanding into direct applications through engineering and systems science This book cover the fundamentals of this emerging filed as well as direct applications and case studies There is a need for practicing engineers computer scientists and system scientists to directly apply fuzzy engineering into a wide array of devices and systems *Soft Computing and Intelligent Systems Design* Fakhreddine O. Karray, Clarence W. De Silva, 2004 Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky s book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate *Soft Computing and Intelligent Systems Design: Theory, Tools and Applications* Karray, 2004 **Intelligent Systems and Soft Computing** Behnam Azvine, Nader Azarmi, Detlef D. Nauck, 2006-12-30 Artificial intelligence has traditionally focused on solving human centered problems like natural language processing or common sense reasoning On the other hand for a while now soft computing has been applied successfully in areas like pattern recognition clustering or automatic control The papers in this book explore the possibility of bringing these two areas together This book is unique in the way it concentrates on building intelligent software systems by combining methods from diverse disciplines such as fuzzy set theory neuroscience agent technology knowledge discovery and symbolic artificial intelligence The first part of the book focuses on foundational aspects and future directions the second part provides the reader with an overview of recently developed software tools for building flexible intelligent systems the final section studies developed applications in various fields **Soft Computing Based Modeling in Intelligent Systems** Valentina Emilia Balas, János Fodor, Annamária R. Várkonyi-Kóczy, 2009-03-03 The book *Soft Computing Based Modeling in Intelligent Systems* contains the tended works originally presented at the IEEE International Workshop

SOFA 2005 and additional papers SOFA an acronym for SOFt computing and Applications is an international workshop intended to advance the theory and applications of intelligent systems and soft computing Lotfi Zadeh the inventor of fuzzy logic has suggested the term Soft Computing He created the Berkeley Initiative of Soft Computing BISC to connect researchers working in these new areas of AI Professor Zadeh participated actively in our workshop Soft Computing techniques are tolerant to imprecision uncertainty and partial truth Due to the large variety and complexity of the domain the constituting methods of Soft Computing are not competing for a comprehensive ultimate solution Instead they are complementing each other for dedicated solutions adapted to each specific problem Hundreds of concrete applications are already available in many domains Model based approaches offer a very challenging way to integrate a priori knowledge into procedures Due to their flexibility robustness and easy interpretability the soft computing applications will continue to have an exceptional role in our technologies The applications of Soft Computing techniques in emerging research areas show its maturity and usefulness The IEEE International Workshop SOFA 2005 held Szeged Hungary and Arad Romania in 2005 has led to the publication of these two edited volumes This volume contains Soft Computing methods and applications in modeling optimisation and prediction

Intelligent Systems and Soft Computing Behnam Azvine, Nader Azarmi, Detlef D. Type-2 Fuzzy Logic: Theory and Applications Oscar Castillo, Patricia Melin, 2009-09-02 This book describes new methods for building intelligent systems using type 2 fuzzy logic and soft computing SC techniques The authors extend the use of fuzzy logic to a higher order which is called type 2 fuzzy logic Combining type 2 fuzzy logic with traditional SC techniques we can build powerful hybrid intelligent systems that can use the advantages that each technique offers This book is intended to be a major reference tool and can be used as a textbook

Soft Computing and Intelligent Systems Design Fakhreddine O. Karray, Clarence W. De Silva, 2004 Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of

the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate

Analysis and Design of Intelligent Systems Using Soft Computing Techniques Patricia Melin, Oscar Castillo, Eduardo G. Ramírez, Witold Pedrycz, 2007-09-20 This book comprises a selection of papers on new methods for analysis and design of hybrid intelligent systems using soft computing techniques from the IFSA 2007 World Congress held in Cancun Mexico June 2007

Computational Intelligence in Economics and Finance Paul P. Wang, Tzu-Wen Kuo, 2007-07-11 Computational intelligence CI as an alternative to statistical and econometric approaches has been applied to a wide range of economics and finance problems in recent years for example to price forecasting and market efficiency This book contains research ranging from applications in financial markets and business administration to various economics problems Not only are empirical studies utilizing various CI algorithms presented but so also are theoretical models based on computational methods In addition to direct applications of computational intelligence readers can also observe how these methods are combined with conventional analytical methods such as statistical and econometric models to yield preferred results Chen Wang and Kuo have grouped the 12 contributions following their introductory chapter into applications of fuzzy logic neural networks including self organizing maps and support vector machines and evolutionary computation All chapters were selected either by invitation or based on a careful selection and extension of best papers from the International Workshop on Computational Intelligence in Economics and Finance in 2005 Overall the book offers researchers an excellent overview of current advances and applications of computational intelligence techniques to economics and finance problems
