China and the Geopolitics of Rare Earths Sophia Kalantzakos, 2018 Rare earths are elements that are found in the Earth's crust and are vital ingredients for the production of a wide variety of high tech defense and green technologies everything from iPhones and medical technologies to wind turbines efficiency lighting smart bombs and submarines While they are not particularly rare in availability they are difficult and expensive to mine Yet China has managed to gain control over an estimated 97 percent of the rare earth industry since the 1990s through cheap production high export taxes and artificial limitations of supply Rare earths and China's monopoly over them became international news after China unofficially curtailed exports to Japan the United States and Europe in 2010 This embargo followed a collision between Chinese and Japanese boats in the East China Sea a locus of geopolitical and economic tension between the two countries Although the World Trade Organization forced China to scrap its restrictions it still holds a stranglehold over these elements that are so critical to the economic and security interests of the United States and its allies In this book Sophia Kalantzakos argues that the 2010 rare earth crisis signaled more than just a trade dispute Rather it raises questions about China's use of economic statecraft and must be regarded as a part of the larger discourse of global power relations Importantly she also argues that the failure of political actors in major industrial nations to enact comprehensive and effective policy solutions or the scientific and business communities to devise sustainable rare earth production outside of China points to future resource competition Focusing on China's monopoly over the rare earth industry China and the Geopolitics of Rare Earths examines the impacts of growing worldwide resource competition and the

Stewardship and the Future of the Planet Rachel Carnell, Chris Mounsey, 2022-07-22 This volume examines historical views of stewardship that have sometimes allowed humans to ravage the earth as well as contemporary and futuristic visions of stewardship that will be necessary to achieve pragmatic progress to save life on earth as we know it The idea of stewardship human responsibility to tend the Earth has been central to human cultures throughout history as evident in the Judeo Christian Genesis story of the Garden of Eden and in a diverse range of parallel tales from other traditions around the world Despite such foundational hortatory stories about preserving the earth on which we live humanity in the Anthropocene is nevertheless currently destroying the planet with breathtaking speed Much research on stewardship today in the disciplines of geography urban studies oceans research and green business practice offers insights that should help address the ecological challenges facing the planet Simultaneous scholarship in the humanities and other fields reminds us that the damage done to the planet has often been carried out in the name of tending the land In order to make progress in environmental stewardship scholars must speak to each other across the disciplinary boundaries as they do in this volume

The Business of Less Roland Geyer,2021-09-06 The Business of Less rewrites the book on business and the environment For the last thirty years corporate sustainability was synonymous with the pursuit of eco efficiency and win win opportunities The notion of eco efficiency gives us the illusion that we can achieve environmental sustainability without having to question the pursuit of never ending economic growth The win win paradigm is meant to assure us that companies can be protectors of the environment whilst also being profit maximizers It is abundantly clear that the state of the natural environment has further degraded instead of improved This book introduces a new paradigm designed to finally reconcile business and the environment It is called net green which means that in these times of ecological overshoot businesses need to reduce total environmental impact and not just improve the eco efficiency of their products The book also introduces and explains the four pollution prevention principles again different less and labor not materials Together net green and the four pollution prevention principles provide a road map for businesses and for every household to a world in which human prosperity and a healthy environment are no longer at odds The Business of Less is full of anecdotes and examples This brings its material to life and makes the book not only very accessible but also hugely applicable for everyone who is worried about the fate of our planet and is looking for answers
