Recent Advances and Perspectives* Josep Lladós, Young-Bin Kwon, 2004-09-23 1

This book contains refereed and improved papers presented at the 5th International Workshop on Graphics Recognition (GREC 2003). GREC 2003 was held in the Computer Vision Center in Barcelona, Spain, during July 30-31, 2003.

The GREC workshop is the main activity of the IAPR Technical Committee 2 on Graphics Recognition. Edited volumes from the previous workshops in the series are available as Lecture Notes in Computer Science (LNCS) Volume 1072 (GREC 1995) at Penn State University, USA; LNCS Volume 1389 (GREC 1997) in Nancy, France; LNCS Volume 1941 (GREC 1999) in Jaipur, India; and LNCS Volume 2390 (GREC 2001) in Kingston, Canada. Graphics recognition is a particular field in the domain of document analysis that combines pattern recognition and image processing techniques for the analysis of any kind of graphical information in documents, either from paper or electronic formats. Topics of interest for the graphics recognition community are vectorization, symbol recognition, analysis of graphic documents with agrammatic notation like electrical diagrams, architectural plans, engineering drawings, musical scores, maps, etc. Graphics-based information retrieval, performance evaluation in graphics recognition, and systems for graphics recognition. In addition to the classic objectives, in recent years graphics recognition has faced up to new and promising perspectives, some of them in conjunction with other scientific communities. Examples of that are sketchy interfaces and on-line graphics recognition in the framework of human

computer interaction or query by graphic content for retrieval and browsing in large format graphic documents digital libraries and Web applications Thus the combination of classic challenges with new research interests gives the graphics recognition field an active scientific community with a promising future
