

Atomic Components of Thought (ACT-R)

- **ACT-R** is a production system theory that tries to explain human. Cognition through a model of **knowledge structures**.
- Two types of knowledge declarative and procedural.
- **Declarative knowledge.**
 - Corresponds to things we know and can describe.
 - Represented by structures call chunks.
 - Chunk defined by a: type and slots (ES –frame).
 - Example: dog chased the cat – type: chase, agent: dog, object: cat.
- **Procedural knowledge.**
 - Knowledge displayed by our behavior but we are not conscious of.
 - No one can describe the rules by which we speak a language, but we do.
 - Defined by production rules:
 - Example: **IF** the goal is to classify a person and he is unmarried.
Then classify him as a bachelor (**action part**).
- **Chunks and productions are the basic building blocks of ACT-R.**

The Atomic Components Of Thought:

The Atomic Components of Thought John R. Anderson, Christian J. Lebiere, 2014-01-09 This book achieves a goal that was set 25 years ago when the HAM theory of human memory was published This theory reflected one of a number of then current efforts to create a theory of human cognition that met the twin goals of precision and complexity Up until then the standard for precision had been the mathematical theories of the 1950s and 1960s These theories took the form of precise models of specific experiments along with some informal verbally stated understanding of how they could be extended to new experiments They seemed to fall far short of capturing the breadth and power of human cognition that was being demonstrated by the new experimental work in human cognition The next 10 years saw two major efforts to address the problems of scope In 1976 the ACT theory was first described and included a production rule system of procedural memory to complement HAM's declarative memory This provided a computationally adequate system which was indeed capable of accounting for all sorts of cognition In 1993 a new version of ACT ACT R was published This was an effort to summarize the theoretical progress made on skill acquisition in the intervening 10 years and to tune the subsymbolic level of ACT R with the insights of the rational analysis of cognition Although the appearance of generally available full function code set off a series of events which was hardly planned it resulted in this book The catalyst for this was the emergence of a user community Lebiere insisted that assembling a critical mass of users was essential to the ultimate success of the theory and that a physical gathering was the only way to achieve that goal This resulted in the First Annual ACT R Summer School and Workshop held in 1994 In writing the book the authors became seized by an aspiration that went beyond just describing the theory correctly They decided to try to display what the theory could do by collecting together and describing some of its in house applications This book reflects decades of work in ACT R accumulated by many researchers The chapters are authored by the people that did that particular work No doubt the reader will be impressed by the scope of the research and the quality of the individual work Less apparent but no less important was the effort that everyone put into achieving the overall consistency and technical integrity of the book This is the first work in cognitive science to precisely model such a wide range of phenomena with a single theory

The Oxford Handbook of Thinking and Reasoning Keith J. Holyoak, Robert G. Interactions between emotions and social context - Basic, clinical and non-human evidence Maria Ruz,Agustin Ibanez,Sonja A E Kotz,Louise Barrett,Jorge Moll,2014-07-17 The emotions that we feel and also those that we perceive in others are crucial to the social functioning of both humans and non human animals Although the role of context has been extensively studied in basic sensory processing its relevance for social cognition and emotional processing is little understood In recent years several lines of research at the behavioral and neural levels have highlighted the bidirectional interactions that take place between emotions and social context Experienced emotions even when incidental bias decision making Remarkably even basic emotions can be strongly influenced by situational contexts In addition both humans and non human animals can use emotional expressions strategically as a means of influencing and managing the behavioral response of others in relation to specific environmental situations Moreover social emotions e g engaged in moral judgment empathic concern and social norms seem to be context dependent which also questions a purely abstract account of emotion understanding and expression as well as other social cognition domains The present Research Topic of Frontiers in Human Neuroscience highlights the need for a situated approach to emotion and social cognition We presented theoretical and empirical work at the behavioral and neural levels that contribute to our understanding of emotion within a highly contextualized social realm and vice versa Relevant contributions are presented from diverse fields including ethology neurology biology cognitive and social neuroscience and as well as psychology and neuropsychiatry This integrated approach that entails the interaction between emotion and social context provide important new insights into the growing field of social neuroscience

Artificial General Intelligence 2008 P. Wang,B. Goertzel,S. Franklin,2008-02-18 The field of Artificial Intelligence AI was initially directly aimed at the construction of thinking machines that is computer systems with human like general intelligence But this task proved more difficult than expected As the years passed AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains In recent years however more and more AI researchers have recognized the necessity and the feasibility of returning to the original goal of the field Increasingly there is a call to focus less on highly specialized narrow AI problem solving systems and more on confronting the difficult issues involved in creating human level intelligence and ultimately general intelligence that goes beyond the human level in various ways Artificial General Intelligence AGI as this renewed focus has come to be called

attempts to study and reproduce intelligence as a whole in a domain independent way Encouraged by the recent success of several smaller scale AGI related meetings and special tracks at conferences the initiative to organize the very first international conference on AGI was taken with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest In this collection you will find the conference papers full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of AGI

How to Build a Brain Chris Eliasmith, 2013-06-27 One goal of researchers in neuroscience psychology and artificial intelligence is to build theoretical models that are able to explain the flexibility and adaptiveness of biological systems How to build a brain provides a detailed guided exploration of a new cognitive architecture that takes biological detail seriously while addressing cognitive phenomena The Semantic Pointer Architecture SPA introduced in this book provides a set of tools for constructing a wide range of biologically constrained perceptual cognitive and motor models Examples of such models are provided and they are shown to explain a wide range of data including single cell recordings neural population activity reaction times error rates choice behavior and fMRI signals Each of these models introduces a major feature of biological cognition addressed in the book including semantics syntax control learning and memory These models are not introduced as independent considerations of brain function but instead integrated to give rise to what is currently the world's largest functional brain model The last half of this book compares the Semantic Pointer Architecture with the current state of the art addressing issues of theory construction in the behavioral sciences semantic compositionality and scalability among other considerations The book concludes with a discussion of conceptual challenges raised by this architecture and identifies several outstanding challenges for this and other cognitive architectures Along the way the book considers neural coding concept representation neural dynamics working memory neuroanatomy reinforcement learning and spike timing dependent plasticity The book includes 8 detailed hands on tutorials exploiting the free Nengo neural simulation environment providing practical experience with the concepts and models presented throughout

Better Than Conscious? Christoph Engel, Wolf Singer, 2008 Experts discuss the implications of the ways humans reach decisions through the conscious and subconscious processing of information

Knowledge and Knowledge Systems: Learning from the Wonders of the Mind Geisler, Eliezer, 2007-09-30 Previous research in the knowledge management and information systems fields simply define knowledge by a few categories and then describe knowledge systems and their usage and the difficulties with them Knowledge and Knowledge Systems Learning from the Wonders of the Mind starts from the beginning where and how knowledge is formed and how it can be measured describing humans and their knowledge path from conception and birth to maturity
