Science, Action, and Reality R. Tuomela, 1985-09-30 Were one to characterize the aims of this book ambitiously it could be said to sketch the philosophical foundations or underpinnings of the scientific world view or better of the scientific conception of the world In any case it develops a comprehensive philosophical view one which takes science seriously as the best method for getting to know the ontological aspects of the world This view is a kind of scientific realism causal internal realism as it is dubbed in the book This brand of realism is tough in matters of ontology but soft in matters of semantics and epistemology An ancestor of the book was published in Finnish under the title *Tiede toiminta ja todellisuus* Gaudeamus 1983 That book is a shortish undergraduate level monograph However as some research level chapters have been added the present book is perhaps best regarded as suited for more advanced readers I completed the book while my stay at the University of Wisconsin in Madison as a Visiting Professor under the Exchange Program between the Universities of Wisconsin and Helsinki I gratefully acknowledge this support I also wish to thank Juhani Saalo and Martti Kuokkanen for comments on the manuscript and for editorial help Dr Matti Sintonen translated the Finnish ancestor of this book into English to be used as a partial basis for this work His translation was supported by a grant from Suomalaisen kirjallisuuden edistämisyseura Finally and as usual I wish to thank Mrs

Rational Changes in Science Joseph C. Pitt, Marcello Pera, 2012-12-06 THE PROBLEMS OF SCIENTIFIC RATIONALITY Fashion is a fickle mistress Only yesterday scientific rationality enjoyed considerable attention consideration and even reverence among philosophers but today's fashion leads us to despise it and the matron rejected and abandoned as Hecuba complains *modo maxima rerum tot generis natisque potens nunc trahor exui inops* to cite Kant for our purpose who cited Ovid for his Like every fashion ours also has its paradoxical aspects as John Watkins correctly reminds in an essay in this volume Enthusiasm for science was high among philosophers when significant scientific results were mostly a promise it declined when that promise became an undeniable reality Nevertheless as with the decline of any fashion even the revolt against scientific rationality has some reasonable grounds If the taste of the philosophical community has changed so much it is not due to an incident or a whim This volume is not about the history of and reasons for this change Instead it provides a view of the new emerging image of scientific rationality in both its philosophical and historical aspects In particular the aim of the contributions gathered here is to focus on the concept around which the discussions about rationality have mostly taken place scientific change

Hereditary Julien Larregue, 2024-01-09 Since the 1990s a growing number of criminal courts around the world have been using expert assessments based on behavioral genetics and neuroscience to evaluate the

responsibility and dangerousness of offenders Despite this rapid circulation however we still know very little about the scientific knowledge underlying these expert evaluations Hereditary traces the historical development of biosocial criminology in the United States from the 1960s to the present showing how the fate of this movement is intimately linked to that of the field of criminology as a whole In claiming to identify the biological and environmental causes of so called antisocial behaviors biosocial criminologists are redefining the boundary between the normal and the pathological Julien Larregue examines what is at stake in the development of biosocial criminology Beyond the origins of delinquency Larregue addresses the reconfiguration of expertise in contemporary societies and in particular the territorial struggles between the medical and legal professions For if the causes of crime are both biological and social its treatment may call for medical as well as legal solutions

Original Science of the Universe Vol. 1: Complete Scientific Solutions Dr. Bhavtosh Chandra,2024-03-15 May there be another suitable way to describe the beginning of the Universe To discover the suitable answers we must search out something more Therefore let us review again according to our modern laws and theories of physics In this book the assumptions for the beginning of the Universe are based on General Theory of Relativity Quantum Mechanics along with some other laws of physics Such assumptions are not supporting any singularity as it has accepted in the Big Bang etc theories The remarkable fact is that the concepted assumptions in this book are solving not only the formation and evolution of the universal cosmic bodies but also giving suitable answers for all probable consequences of the planetarian etc constructions mostly of the Earth

Pseudoscience and Science Fiction Andrew May, 2016-09-13 Aliens flying saucers ESP the Bermuda Triangle antigravity are we talking about science fiction or pseudoscience Sometimes it is difficult to tell the difference Both pseudoscience and science fiction SF are creative endeavours that have little in common with academic science beyond the superficial trappings of jargon and subject matter The most obvious difference between the two is that pseudoscience is presented as fact not fiction Yet like SF and unlike real science pseudoscience is driven by a desire to please an audience in this case people who want to believe This has led to significant cross fertilization between the two disciplines SF authors often draw on real pseudoscientific theories to add verisimilitude to their stories while on other occasions pseudoscience takes its cue from SF the symbiotic relationship between ufology and Hollywood being a prime example of this This engagingly written well researched and richly illustrated text explores a wide range of intriguing similarities and differences between pseudoscience and the fictional science found in SF Andrew May has a degree in Natural Sciences from Cambridge University and a PhD in astrophysics from Manchester University After many years in academia and the private sector he now works as a freelance writer and scientific consultant He has written pocket biographies of Newton and Einstein as well as contributing to a number of popular science books He has a lifelong interest in science fiction and has had several articles published in Fortean Times magazine
