Ahmed, 2013-11-01 Women's low status and persistent gender gaps in health and education in South Asia contribute to chronic child malnutrition Smith et al 2003 and food insecurity von Grebmer et al 2009 even as other determinants of food security such as per capita incomes have improved This is particularly relevant for Bangladesh where chronic food insecurity continues to be an important issue despite steady advances in food production To be able to leverage agriculture as an engine of inclusive growth there is a need to develop indicators for measuring women's empowerment examine its relationship to various food security outcomes and monitor the impact of interventions to empower women Using nationally representative survey data from Bangladesh we examine the relationship between women's empowerment in agriculture and two measures of household

food security per adult equivalent calorie availability and dietary diversity We use the Women's Empowerment in Agriculture Index to assess the extent of women's empowerment in agriculture and instrumental variables techniques to correct for the potential endogeneity of empowerment We find that the overall women's empowerment score, the number of groups in which women actively participate, women's control of assets and a narrowing gap in empowerment between men and women within households are positively associated with calorie availability and dietary diversity
