management of recreational fisheries However the large number of anglers and access points makes monitoring recreational fishing much more difficult than monitoring commercial fishing This report reviews the types of survey methods used to estimate catch in recreational fisheries including state federal cooperative programs The report finds that both telephone survey and onsite access components of the current monitoring systems have serious flaws in design or implementation There are also several areas of miscommunication and mismatched criteria among designers of surveys data collectors and recreational fisheries The report recommends that a comprehensive universal sampling frame with national coverage should be established and that improvements should be made in statistical analysis of the data collected and in the ways the data are communicated A permanent and independent research group should be established and funded to evaluate the statistical design and adequacy of recreational fishery surveys and to guide necessary modifications or new initiatives *The implementation of fishing e-logbook for small-scale fisheries in Indonesia* Abdi, M., Nazruddin, M., Arifuddin, M., Gunawan Giu, L., 2022-06-09 This study provides inputs for Indonesian fishermen and MMAF to implement e logbook for small scale fisheries This study recommends solution to improve fisheries data collection and fisheries planning process in Indonesia

Design Change to Fishery Independent Surveys: When to Adjust and How to Account For It Fabio Campanella, Ben Scoulding, Nathan Bacheler, Kyle Shertzer, 2025-03-07 Fishery independent surveys provide crucial information for monitoring and assessing marine fish stocks Their utility can largely be attributed to sampling procedures that are consistent across space and time such that observed dynamics can reasonably be assumed to reflect those of the population or community being studied However sometimes changes to the survey design become desirable or necessary They may be desirable if the benefits of modification outweigh the benefits of consistency for example with improvements in sampling technology or efficiency revised survey priorities or increased funding that allows for greater spatial coverage or temporal resolution In other cases changes to the survey design may not be desirable but necessary for example when specific supplies or equipment become unobtainable or with reductions in funding ship time or human resources
