Theories of Informetrics and Scholarly Communication Cassidy R. Sugimoto, 2016-02-22 Scientometrics have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published The need for a theory of citing a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact

Association Models Raymond Sin-Kwok Wong, 2010-02-09 Many social science data are by nature organized in cross classified formats for example gender and racial differences in the relationship between education and occupation cross national and or temporal changes in patterns of marriage homogamy temporal variations in import export or input output patterns changes in the relationship between class positions party identification and voting and changes in the characteristics of urban neighborhoods in the United States over time While the substantive rationale in exploring their systematic relationship may appear simple and straightforward the application of appropriate statistical tools to decipher and interpret the meaning and complexities of the relationships involved can sometimes be difficult Fortunately with the important pioneering works in this field we now have a large repertoire of statistical models association models in particular which are well suited for such analyses Although association models have been widely utilized by social stratification

researchers especially in the study of social mobility and assortative mating such techniques have yet to be widely disseminated to other social science disciplines This is partly because most of the important contributions are scattered in various journals and there has not been any systematic effort to integrate the family of association models into a single coherent framework

Rasch Models in Health Karl Bang Christensen, Svend Kreiner, Mounir Mesbah, 2013-01-29 The family of statistical models known as Rasch models started with a simple model for responses to questions in educational tests presented together with a number of related models that the Danish mathematician Georg Rasch referred to as models for measurement Since the beginning of the 1950s the use of Rasch models has grown and has spread from education to the measurement of health status This book contains a comprehensive overview of the statistical theory of Rasch models Part 1 contains the probabilistic definition of Rasch models Part 2 describes the estimation of item and person parameters Part 3 concerns the assessment of the data model fit of Rasch models Part 4 contains applications of Rasch models Part 5 discusses how to develop health related instruments for Rasch models and Part 6 describes how to perform Rasch analysis and document results

Multilevel Network Analysis for the Social Sciences Emmanuel Lazega, Tom A.B. Snijders, 2015-12-16 This volume provides new insights into the functioning of organizational managerial and market societies Multilevel analysis and social network analysis are described and the authors show how they can be combined in developing the theory methods and empirical applications of the social sciences This book maps out the development of multilevel reasoning and shows how it can explain behavior through two different ways of contextualizing it First by identifying levels of influence on behavior and different aggregations of actors and behavior and complex interactions between context and behavior Second by identifying different levels as truly different systems of agency such levels of agency can be examined separately and jointly since the link between them is affiliation of members of one level to collective actors at the superior level It is by combining these approaches that this work offers new insights New case studies and datasets that explore new avenues of theorizing and new applications of methodology are presented This book will be useful as a reference work for all social scientists economists and historians who use network analyses and multilevel statistical analyses Philosophers interested in the philosophy of science or epistemology will also find this book valuable

Modern Research Methods for the Study of Behavior in Organizations Jose M. Cortina, Ronald S. Landis, 2013 The goal of the chapters in this SIOP Organizational Frontiers Series volume is to challenge researchers to break away from the rote application of traditional methodologies and to capitalize upon the wealth of data collection and analytic strategies available to them In that spirit many of the chapters in this book deal with methodologies that encourage organizational scientists to re conceptualize phenomena of interest e g experience sampling catastrophe modeling employ novel data collection strategies e g data mining Petri nets and or apply sophisticated analytic techniques e g latent class analysis The editors believe that these chapters provide compelling solutions for the complex problems faced by organizational researchers

A Survey of Statistical Network Models Anna

Goldenberg, Alice X. Zheng, Stephen E. Fienberg, Edoardo M. Airoldi, 2010 Networks are ubiquitous in science and have become a focal point for discussion in everyday life Formal statistical models for the analysis of network data have emerged as a major topic of interest in diverse areas of study and most of these involve a form of graphical representation Probability models on graphs date back to 1959 Along with empirical studies in social psychology and sociology from the 1960s these early works generated an active network community and a substantial literature in the 1970s This effort moved into the statistical literature in the late 1970s and 1980s and the past decade has seen a burgeoning network literature in statistical physics and computer science The growth of the World Wide Web and the emergence of online networking communities such as Facebook MySpace and LinkedIn and a host of more specialized professional network communities has intensified interest in the study of networks and network data Our goal in this review is to provide the reader with an entry point to this burgeoning literature We begin with an overview of the historical development of statistical network modeling and then we introduce a number of examples that have been studied in the network literature Our subsequent discussion focuses on a number of prominent static and dynamic network models and their interconnections We emphasize formal model descriptions and pay special attention to the interpretation of parameters and their estimation We end with a description of some open problems and challenges for machine learning and statistics

Network Analysis and Ethnographic

Problems Douglas White, Ulla Johansen, 2005-01-01 Using network visualization and the study of the dynamics of marriage choices Network Analysis and Ethnographic Problems expands the theory of social practice to show how changes in the structure of a society's kinship network affect the development of social cohesion over time Using the genealogical networks of a Turkish nomad clan authors Douglas White and Ulla Johansen explore how changes in network cohesion are revealed to be indicative of key processes of social change This approach alters in fundamental ways the anthropological concepts of social structure organizational dynamics social cohesion marriage strategies as well as the study of community politics within the dynamics of ongoing personal interaction

Models of Science Dynamics Andrea Scharnhorst, Katy Börner, Peter van den Besselaar, 2012-01-23 Models of Science Dynamics aims to capture the structure and evolution of science the emerging arena in which scholars science and the communication of science become themselves the basic objects of research In order to capture the essence of phenomena as diverse as the structure of co authorship networks or the evolution of citation diffusion patterns such models can be represented by conceptual models based on historical and ethnographic observations mathematical descriptions of measurable phenomena or computational algorithms Despite its evident importance the mathematical modeling of science still lacks a unifying framework and a comprehensive study of the topic This volume fills this gap reviewing and describing major threads in the mathematical modeling of science dynamics for a wider academic and professional audience The model classes presented cover stochastic and statistical models system dynamics approaches agent based simulations population dynamics models and complex network models The book comprises an introduction and a

foundational chapter that defines and operationalizes terminology used in the study of science as well as a review chapter that discusses the history of mathematical approaches to modeling science from an algorithmic historiography perspective It concludes with a survey of remaining challenges for future science models and their relevance for science and science policy

The New Dynamics of Ageing Volume 1 Alan Walker, 2018-02-28 The two volumes of The New Dynamics of Ageing provide a comprehensive interdisciplinary overview of the latest research on aging Together they report the outcomes of the New Dynamics of Ageing research projects the most intensive investigation ever undertaken into both the influences that shape the changing nature of aging and their consequences for individuals and society Providing crucial insights into aging and its impact on an individual national and global scale these volumes are an indispensable reference for researchers policy makers and students In Volume 1 essays concentrate on three major themes active aging design for aging and the relationship between aging and socioeconomic development Each chapter provides a comprehensive topic summary and reports the findings of the New Dynamics of Ageing research projects emphasizing the practical implications of aging and stressing how evidence based policies practices and products can produce individual and societal benefits
