Model-Based Monitoring and Statistical Control Kohei Ohtsu, 2024-06-11 Available in English for the first time this classic and influential book by the late Kohei Ohtsu presents real examples of ships in motion under irregular ocean waves how to understand the characteristics of fluctuations of stochastic phenomena through spectral analysis methods and statistical modeling It also explains how to realize prediction and optimal control based on time series models In recent years the need to improve safety and reduce environmental impact in ship operations has been increasing and the statistical methods presented in this book will be increasingly needed in the future In addition the recent development of innovative AI technology and highspeed communications will make it possible to adapt this method not only to ship monitoring and control but also to any field that involves irregular fluctuations and it is expected to contribute to solving issues that have been difficult to solve in the past Part 1 describes classical spectral method for the analysis of stochastic phenomena In Part 2 this book explains methods to construct time series models using the information criterion to capture the characteristics of ship and engine motions using the model to design a model based monitoring

system that informs navigators operating the ship and managers ashore Furthermore it explains statistical control method to design an autopilot system and the governor of a marine engine while showing actual examples Part 3 presents the basic knowledge necessary for understanding these topics of the book namely the basic theory of ship motion probability and statistics Kalman filter and statistical optimal control theory
