focus specifically on the public sector Running the Numbers in contrast explores a wide array of topics of regional importance including economic output demographics business structure labour markets and income among many others To that end the book stresses practical applications minimises the use of maths and employs extended chapter length examples that demonstrate how analytical tools can illuminate the social and economic workings of actual American regions

Advances in Statistical Multisource-Multitarget Information Fusion Ronald P.S. Mahler,2014-08-01 This is the sequel to the 2007 Artech House bestselling title Statistical Multisource Multitarget Information Fusion That earlier book was a comprehensive resource for an in depth understanding of finite set statistics FISST a unified systematic and Bayesian approach to information fusion The cardinalized probability hypothesis density CPHD filter which was first systematically described in the earlier book has since become a standard multitarget detection and tracking technique especially in research and development Since 2007 FISST has inspired a considerable amount of research conducted in more than a dozen nations and reported in nearly a thousand publications This sequel addresses the most intriguing practical and theoretical advances in FISST for the first time aggregating and systematizing them into a coherent integrated and deep dive picture Special emphasis is given to computationally fast exact closed form implementation approaches The book also includes the first complete and systematic description of RFS based sensor platform management and situation assessment *DATA MINING FOR MACHINE LEARNING AND STATISTICS* Dr. John Martin,Dr. V SelvaKumar,Rashmi Rani Patro,Rojalini Patro,

An Introduction to Artificial Psychology Hojjatollah Farahani,Marija Blagojević,Parviz Azadfallah,Peter Watson,Forough Esrafilian,Sara Saljoughi,2023-05-18 Artificial Psychology AP is a highly multidisciplinary field of study in psychology AP tries to solve problems which occur when psychologists do research and need a robust analysis method Conventional statistical approaches have deep rooted limitations These approaches are excellent on paper but often fail to model the real world Mind researchers have been trying to overcome this by simplifying the models being studied This stance has not received much practical attention recently Promoting and improving artificial intelligence helps mind researchers to find a holistic model of mental models This development achieves this goal by using multiple perspectives and multiple data sets together with interactive and realistic models In this book the methodology of approximate inference in psychological research from a theoretical and practical perspective has been considered Quantitative variable oriented methodology and qualitative case oriented methods are both used to explain the set oriented methodology and this book combines the precision of quantitative methods with information from qualitative methods This is a book that many researchers can use to expand and deepen their psychological research and is a book which can be useful to postgraduate students The reader does not need an in depth knowledge of mathematics or statistics because statistical and mathematical intuitions are key here and they will be learned through practice What is important is to understand and use the new application of the methods for finding new dynamic and realistic interpretations This book incorporates theoretical fuzzy inference and deep machine

learning algorithms in practice This is the kind of book that we wished we had had when we were students This book covers at least some of the most important issues in mind research including uncertainty fuzziness continuity complexity and high dimensionality which are inherent to mind data These are elements of artificial psychology This book implements models using R software
