The Nurbs Book Monographs In Visual Communication:

The NURBS Book Les Piegl, Wayne Tiller, 2012-12-06 Until recently B spline curves and surfaces NURBS were principally of interest to the computer aided design community where they have become the standard for curve and surface description Today we are seeing expanded use of NURBS in modeling objects for the visual arts including the film and entertainment industries art and sculpture NURBS are now also being used for modeling scenes for virtual reality applications These applications are expected to increase Consequently it is quite appropriate for The N U R B S Book to be part of the Monographs in Visual Communication Series B spline curves and surfaces have been an enduring element throughout my professional life The first edition of Mathematical Elements for Computer Graphics published in 1972 was the first computer aided design interactive computer graphics textbook to contain material on B splines That material was obtained through the good graces of Bill Gordon and Louie Knapp while they were at Syracuse University A paper of mine presented during the Summer of 1977 at a Society of Naval Architects and Marine Engineers meeting on computer aided ship surface design was arguably the first to examine the use of B spline curves for ship design For many B splines rational B splines and NURBS have been a bit mysterious The Nurbs Book Les Piegl, Wayne Tiller, 1995-07-13 The book covers all

aspects of non uniform rational B splines necessary to design geometry in a computer aided environment Basic B spline features curve and surface algorithms and state of the art geometry tools are all discussed Detailed code for design algorithms and computational tricks are covered too in a lucid easy to understand style with a minimum of mathematics and using numerous worked examples The book will be a must for students researchers and implementors whose work involves the use of splines The NURBS Book Les A. Piegl, Wayne Tiller, 1995 NURBS non uniform rational B splines are a

geometric tool used for computer aided design This book introduces all aspects of NURBS at a level suitable for both students and implementors **3D Visual Communications** Guan-Ming Su, Yu-chi Lai, Andres Kwasinski, Haohong Wang, 2012-12-12 Provides coverage of the major theories and technologies involved in the lifecycle of 3D video content delivery Presenting the technologies used in end to end 3D video communication systems this reference covers 3D graphics and video coding content creation and display and communications and networking It covers the full range of key areas from the fundamentals of 3D visual representation to the latest 3D video coding techniques relevant communication infrastructure and networks to the 3D quality of experience The book is structured to logically lead readers through the topic starting with generic and fundamental information continuing with a detailed section of different visualisation techniques before concluding with an extensive view of 3D mobile communication systems and trends The authors give most focus to four important areas 3D video coding and communications 3D graphics gaming and mobile communications end to end 3D ecosystem including 3D display 3D player networking facility and 3D quality issues and future communications and networks advances for emerging 3D experience Presents the theory and key concepts behind the latest 3D visual coding framework

standards and corresponding quality assessment Provides fundamental material which forms the basis for future research on enhancing the performance of 3D visual communications over current and future wireless networks Covers important topics including 3D video coding and communications 3D graphics gaming and mobile communications end to end 3D ecosystem and future communications and networks advances for emerging 3D experience Essential reading for engineers involved in the research design and development of 3D visual coding and 3D visual transmission systems and technologies as well as academic and industrial researchers *MARINE 2011, IV International Conference on Computational Methods in Marine Engineering* Luís Eça, Eugenio Oñate, Julio García-Espinosa, Trond Kvamsdal, Pål Bergan, 2013-03-19 This book contains selected papers from the Fourth International Conference on Computational Methods in Marine Engineering held at Instituto Superior Técnico Technical University of Lisbon Portugal in September 2011 Nowadays computational methods are an essential tool of engineering which includes a major field of interest in marine applications such as the maritime and offshore industries and engineering challenges related to the marine environment and renewable energies The 2011 Conference included 8 invited plenary lectures and 86 presentations distributed through 10 thematic sessions that covered many of the most relevant topics of marine engineering today This book contains 16 selected papers from the Conference that cover CFD for Offshore Applications Fluid Structure Interaction Isogeometric Methods for Marine Engineering Marine Offshore Renewable Energy Maneuvering and Seakeeping Propulsion and Cavitation and Ship Hydrodynamics The papers were selected with the help of the recognized experts that collaborated in the organization of the thematic sessions of the Conference which guarantees the high quality of the papers included in this book Intelligence and Safety for Humanoid Robots: Design, Control, and Applications Zhihong Tian, Zhaoquan Gu, Yanhua Li, Wei Shi, Keke Tang, Zheng Wang, 2022-02-07

Geometrically Exact Theory for Contact Interactions Alexander Konyukhov, 2014-08-22 The intuitive understanding of contact bodies is based on the geometry and adjoining surfaces A powerful approach to solve the contact problem is to take advantage of the geometry of an analyzed object and describe the problem in the best coordinate system This book is a systematical analysis of geometrical situations leading to contact pairs surface to surface curve to surface point to surface and so resulting in the corresponding computational algorithms to solve the contact problem *Geometry of Surfaces* Stephen P. Radzevich, 2013-01-04 Presents an in depth analysis of geometry of part surfaces and provides the tools for solving complex engineering problems *Geometry of Surfaces A Practical Guide for Mechanical Engineers* is a comprehensive guide to applied geometry of surfaces with focus on practical applications in various areas of mechanical engineering The book is divided into three parts on Part Surfaces Geometry of Contact of Part Surfaces and Mapping of the Contacting Part Surfaces *Geometry of Surfaces A Practical Guide for Mechanical Engineers* combines differential geometry and gearing theory and presents new developments in the elementary theory of enveloping surfaces Written by a leading expert of the field this book also provides the reader with the tools for solving complex engineering problems in the field of mechanical engineering Presents an in

depth analysis of geometry of part surfaces Provides tools for solving complex engineering problems in the field of mechanical engineering Combines differential geometry and gearing theory Highlights new developments in the elementary theory of enveloping surfaces Essential reading for researchers and practitioners in mechanical automotive and aerospace engineering industries CAD developers and graduate students in Mechanical Engineering Computer Algebra in Scientific Computing CASC 2001 Viktor G. Ganzha, Ernst W. Mayr, Evgenii V. Vorozhtsov, 2012-12-06 CASC 2001 continues a tradition started in 1998 of international conferences on the latest advances in the application of computer algebra systems to the solution of various problems in scientific computing The three earlier CASs conferences in this sequence CASC 98 CASC 99 and CASC 2000 were held in Petersburg Russia in Munich Germany and in Samarkand respectively in Uzbekistan and proved to be very successful We have to thank the program committee listed overleaf for a tremendous job in soliciting and providing reviews for the submitted papers There were more than three reviews per submission on average The result of this job is reflected in the present volume which contains revised versions of the accepted papers The collection of papers included in the proceedings covers various topics of computer algebra methods algorithms and software applied to scientific computing In particular five papers are devoted to the implementation of the analysis of involutive systems with the aid of CASs The specific examples include new efficient algorithms for the computation of Janet bases for monomial ideals involutive division involutive reduction method etc A number of papers deal with application of CASs for obtaining and validating new exact solutions to initial and boundary value problems for partial differential equations in mathematical physics Several papers show how CASs can be used to obtain analytic solutions of initial and boundary value problems for ordinary differential equations and for studying their properties **Isogeometric Analysis and Applications 2014** Bert Jüttler, Bernd Simeon, 2015-12-21 Isogeometric Analysis is a groundbreaking computational approach that promises the possibility of integrating the finite element method into conventional spline based CAD design tools It thus bridges the gap between numerical analysis and geometry and moreover it allows to tackle new cutting edge applications at the frontiers of research in science and engineering This proceedings volume contains a selection of outstanding research papers presented at the second International Workshop on Isogeometric Analysis and Applications held at Annweiler Germany in April 2014
