Centering Humanism in STEM Education

Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM

ago projections of how office technologies would revolutionize the production of documents in a high tech future carried many promises. The paperless office and the seamless and problem free sharing of texts and other work materials among co-workers were just around the corner we were told. To anyone who has been involved in putting together a volume of the present kind such forecasts will be met with considerable skepticism if not outright distrust. The diskette, the email, the fax, the net and all the other forms of communication that are now around are powerful assets but they do not in any way reduce the flow of paper or the complexity of coordinating activities involved in producing an artifact such as a book. Instead the reverse seems to be true. Obviously the use of such tools requires considerable skill at the center of coordination to borrow an expression from a chapter in this volume. As editors we have been fortunate to have Ms Lotta Strand, Linköping University at the center of the distributed activity that producing this volume has required over the last few years. With her considerable skill and patience Ms Strand and her work provide a powerful illustration of the main thrust of most of the chapters in this volume.

Web Anatomy Robert Hoekman Jr., Jared Spool, 2009-12-09. At the start of every web design project the ongoing struggles reappear. We want to design highly usable and self-evident applications but we also want to devise innovative, compelling and exciting interactions that make waves in the market. Projects are more sophisticated than ever but we have fewer resources with which to complete them. Requirements are fuzzy at best but we're expected to have everything done yesterday.
