Solar Powering Your Community A Guide For Local Governments:

Solar Powering Your Community, 2009 DOE has developed this guide to help local governments design and implement local solar plans This guide includes examples and models tested in cities Many of the examples are results of DOE's Solar America Cities Program Solar Powering Your Community Steven Chu, 2011-01-01 As demand for energy increases many communities are seeking ways to meet this demand with clean safe reliable energy from renewable sources such as sun and wind Fortunately many of the key technologies that can unlock the power of these renewable resources are available on the market today While the U S Department of Energy DOE continues to fund research and development R D to improve solar technologies DOE is also focusing on accelerating a robust nationwide market for the currently available technologies Development of a nationwide market requires overcoming barriers to widespread adoption of solar energy technologies These barriers include complicated procedures for permitting and connecting systems to the grid financing challenges a lack of awareness of solar energy solutions among key decision makers and a lack of trained installation contractors Local governments are uniquely positioned to remove many of these barriers clearing the way for solar markets to thrive in their locales Representatives of local governments who understand and prepare for policy and market changes can optimally position their communities in the emerging renewable energy economy To accelerate the nationwide adoption of solar energy DOE established partnerships with 25 Solar America Cities around the United States Local organizations and policy makers in each Solar America City are taking a comprehensive approach to bringing solar to their cities Their work lays the foundation for a viable solar market and offers a model for other communities to follow As a result of the progress made in the 25 Solar America Cities in 2010 DOE announced a new effort to share the best practices developed with thousands of local governments across the nation As part of this evolution DOE created a broader program called Solar America Communities to reflect the intention to promote solar market development within cities counties and all other local jurisdictions This is a comprehensive resource DOE created to assist local governments and stakeholders in designing and implementing a strategic local solar plan This guide includes examples and models that have been field tested in cities and counties around the country Many of the examples are the direct result of DOE's Solar America Communities program

Privatization in Practice Joaquin Jay Gonzalez III, Roger L. Kemp, 2016-07-12 Cost efficiency was the initial goal of privatization achieved in many cases but not consistently Public services provided by the private sector were cheap in the beginning but became increasingly expensive especially to low income citizens The lessons learned from early successes and failures gave birth to a new goal effectiveness of services as measured by accountable results Government officials are not looking just for proven budget savings they must also be concerned with the quality of public services and ultimately the happiness of citizens and communities In its updated second edition this collection of essays explores the good and the bad sides of privatization Instructors considering this book for use in a course may request an examination copy here Local

Climate Action Planning Michael R. Boswell, Adrienne I. Greve, Tammy L. Seale, 2012-07-16 Climate change is a global problem but the problem begins locally Cities consume 75% of the world's energy and emit 80% of the world's greenhouse gases Changing the way we build and operate our cities can have major effects on greenhouse gas emissions Fortunately communities across the U S are responding to the climate change problem by making plans that assess their contribution to greenhouse gas emissions and specify actions they will take to reduce these emissions This is the first book designed to help planners municipal staff and officials citizens and others working at local levels to develop Climate Action Plans CAPs are strategic plans that establish policies and programs for mitigating a community's greenhouse gas GHGs emissions They typically focus on transportation energy use and solid waste and often differentiate between community wide actions and municipal agency actions CAPs are usually based on GHG emissions inventories which identify the sources of emissions from the community and quantify the amounts Additionally many CAPs include a section addressing adaptation how the community will respond to the impacts of climate change on the community such as increased flooding extended drought or sea level rise With examples drawn from actual plans Local Climate Action Planning guides preparers of CAPs through the entire plan development process identifying the key considerations and choices that must be made in order to assure that a plan is both workable and effective

Solar Powering Your Community, 2012 This fact sheet describes the details of the Solar Powering Your Community A Guide for Local Governments This report has been developed by the U S Department of Energy DOE as a comprehensive resource to assist local governments and stakeholders in designing and implementing a strategic local solar plan The guide presents helpful information on a wide array of topics that are of particular interest to cities and local communities

Go Solar California : a Step by Step Tool Kit for Local Governments to Go Solar : California Energy Commission's New Solar Homes Partnership, 2009

Harness the Sun Philip Warburg, 2016-09-06 Going from the inner city to the open desert a seasoned environmental advocate looks at solar energy's remarkable ascent and its promise for America's future Solar power was once the domain of futurists and environmentally minded suburbanites Today it is part of mainstream America Scan the skyline of downtown neighborhoods check out the rooftop of the nearest Walmart and take a close look at your local sports arena Chances are you'll find solar panels in those and many other unexpected places In Harness the Sun Philip Warburg takes readers on a far flung journey that explores America's solar revolution Beginning with his solar powered home in New England he introduces readers to the pioneers who are spearheading our move toward a clean energy economy We meet the CEOs who are propelling solar power to prominence and the intrepid construction workers who scale our rooftops installing panels We encounter the engineers who are building giant utility scale projects in prime solar states like Nevada Arizona and California and the biologists who make sure wildlife is protected at those sites Warburg shows how solar energy has won surprising support across the political spectrum Prominent conservatives embrace solar power as an emblem of market freedom while environmental advocates see it as a

way to reduce America's greenhouse gas emissions At the same time economic justice activists celebrate solar's potential to lift up low income communities and Native American leaders welcome the income and jobs that the industry will bring to their communities Yet solar energy has its downsides and detractors too Conservationists worry about the impact of large solar farms on protected animal species and some local citizens groups resent the encroachment of solar projects on farmland and open spaces Warburg gives voice to those at the epicenter of these conflicts and points the way to constructive solutions Harness the Sun offers a grounded persuasive vision of America's energy future It is a future fueled by clean renewable sources of power with solar at center stage

The Geopolitics of Renewables Daniel Scholten,2018-01-11

Renewables are a game changer for interstate energy relations Their abundance and intermittency possibilities for decentral generation and use of rare earth materials and generally electric nature of transportation make them very different from fossil fuels What do these geographic and technical characteristics of renewable energy systems imply for infrastructure topology and operations business models and energy markets What are the consequences for the strategic realities and policy considerations of producer consumer and transit countries and energy related patterns of cooperation and conflict between them Who are the winners and losers The Geopolitics of Renewables is the first in depth exploration of the implications for interstate energy relations of a transition towards renewable energy Fifteen international scholars combine insights from several disciplines international relations geopolitics energy security renewable energy technology economics sustainability transitions and energy policy to establish a comprehensive overview and understanding of the emerging energy game Focus is on contemporary developments and how they may shape the coming decades on three levels of analysis The emerging global energy game winners and losers Regional and bilateral energy relations of established and rising powers Infrastructure developments and governance responses The book is recommended for academics and policy makers It offers a novel analytical framework that moves from geography and technology to economics and politics to investigate the geopolitical implications of renewable energy and provides practical illustrations and policy recommendations related to specific countries and regions such as the US EU China India OPEC and Russia
