

Student Growth Objective Form
(DISTRICT-DEVELOPED SAMPLE SGO for GRADE 8 SCIENCE)

Name	School	Grade	Course/Subj ect	Number of Student s	Interval of Instruction
		8	SCIENCE		Sept.2019 - April 2020
Standards, Rationale, and Assessment Method Name the content standards covered, state the rationale for how these standards are critical for the next level of the subject, other academic disciplines, and/or life/college/career. Name and briefly describe the format of the assessment method.					
RATIONALE The students in middle school develop understanding of key concepts to help them make sense of life science, physical science and earth science. The ideas explored and investigated in middle school build upon students' science understanding from earlier grades and from the disciplinary core ideas (DCI's), science and engineering practices (SEP's), and crosscutting concepts (CCC's) of other experiences. Students are also expected to demonstrate understanding of several science and engineering practices, including planning and carrying out investigations, developing and using models, analyzing and interpreting data and engaging in argument from evidence among others. The standards listed below will be addressed within the Earth Systems Science module, the Physical Science module and the Life science module over the course of the year. These standards are important and necessary to facilitate the students' understanding the foundation and nature of science and to explain phenomena, as they develop their ability to analyze and interpret data. Additionally, this SGO includes all of the NGSS standards related to creating / setting a foundation for students who will venture onto High School and which is fundamental to many careers in science.					
STANDARDS NGSS MS-PS3-1 Construct and interpret graphical displays of data to describe the relationships of kinetic energy to the mass of an object and to the speed of an object.					
NGSS MS-PS3-4 Plan an investigation to determine the relationships among the energy transferred, the type of matter, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.					
NGSS MS-ESS2-2 Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.					
NGSS MS-ETS1-4 Develop a model to generate data for iterative testing and modification of a proposed object, tool, or process such that an optimal design can be achieved.					
NGSS MS-ESS2-3 Analyze and interpret data on the distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of the past plate motions.
