Implications for Education and Well-being** OECD, 2024-05-15 Childhood is changing in ways that we are still unpacking affected by digitalization globalization and climate change as well as shocks

such as the COVID 19 pandemic In many OECD education systems child empowerment is increasingly an explicit aim of policies and practices But it is often poorly defined which risks turning it into a mere slogan With the advancement of children s rights children are increasingly being included as stakeholders in decision making processes This report gives examples of how children in OECD countries can and do participate in making decisions about issues that affect them The report examines children s emotional well being and physical activity and the role of schools as a physical space to create and support relationships It also underlines the untapped potential of media education when it comes to seizing opportunities in childhood Empowering all children to make the most of digital opportunities starts with further narrowing the gap in terms of access to digital tools and the Internet where inequalities are persistent and pervasive So what does child empowerment mean today Empowered children have the opportunity and ability to act on issues important and relevant to them can learn by making mistakes and are key contributors to democracy

**Why Women Read Fiction** Helen Taylor,2019-12-05 Ian McEwan once said When women stop reading the novel will be dead This book explains how precious fiction is to contemporary women readers and how they draw on it to tell the stories of their lives Female readers are key to the future of fiction and as parents teachers and librarians the glue for a literate society Women treasure the chance to read alone but have also gregariously shared reading experiences and memories with mothers daughters grandchildren and female friends For so many reading novels and short stories enables them to escape and to spread their wings intellectually and emotionally This book written by an experienced teacher

scholar of women's writing and literature festival director draws on over 500 interviews with and questionnaires from women readers and writers. It describes how where and when British women read fiction and examines why stories and writers influence the way female readers understand and shape their own life stories. Taylor explores why women are the main buyers and readers of fiction, members of book clubs, attendees at literary festivals and organisers of days out to fictional sites and writers' homes. The book analyses the special appeal and changing readership of the genres of romance, erotica and crime. It also illuminates the reasons for British women's abiding love of two favourite novels, *Pride and Prejudice* and *Jane Eyre*. Taylor offers a cornucopia of witty and wise women's voices of both readers themselves and also writers such as Hilary Mantel, Helen Dunmore, Katie Fforde and Sarah Dunant. The book helps us understand why, in Jackie Kay's words, our lives are mapped by books.

**The Future of German Studies** Tina-Karen Pusse, Olga Springer, 2025-11-03. Across Europe and North America, language and literature departments are contracting at a pace that would have been unthinkable two decades ago. Courses are frozen, programmes merged or dissolved, and the study of specific languages, German not least among them, is too often dismissed as a dispensable ornament of the past. Beneath this development lies a familiar and deeply flawed assumption: that in an age of translation driven by large language models and frictionless global communication, the value of linguistic competence is decreasing. If we can converse through our devices, why still learn to speak and think in another tongue? As we know, language learning is about much more than communication. It is about metacognition, about understanding how thought takes shape in and through language. But even more fundamentally, it forces us to ask what communication itself really means. Generative AI: Large language models may allow us to make ourselves understood at a basic level, but true communication is not about transmission alone. At its core lies understanding others, their assumptions, histories, and emotional registers, and developing the sensibility to perceive meaning within a specific cultural and linguistic horizon. Machines can translate words, but they cannot translate worlds. The work of learning a language remains at its core an ethical practice, an act of attentiveness to otherness. In addition, the future of Large Language Models relies on constant new, high-quality human input and human feedback loops evaluating, for example, the quality of translations. Without this, it has been shown, the quality of their outputs deteriorates quickly. There is also the matter of resilience. The assumption that so-called Artificial Intelligence will always be available, affordable, and free from ideological inflections, attributes already debatable in many of its current incarnations, is a form of collective wishful thinking. What happens when access to such tools is increasingly monetized or politically restricted? What happens in times of war, electricity outages, censorship, or digital collapse? Linguistic self-sufficiency, our ability to read, think, and communicate across cultures without mediation, may soon be more than a scholarly virtue. It may be a civic necessity.
