Softwareverteilung und Systeminstallation Christian Wimmer, 2008-11-04 Inhaltsangabe Einleitung Stationäre Computer und Laptops sind aus dem heutigen Alltag nicht mehr wegzudenken. Beinahe alle Prozesse in einem Unternehmen werden heute von Computern unterstützt. Es obliegt dabei einer speziellen Gruppe von Mitarbeitern, diese Computer und die Infrastruktur am Laufen zu halten. Diese Administratoren sind dabei auch für die Versorgung der Rechner mit den richtigen Software verantwortlich. Sobald ein zu verwaltendes Netzwerk von Computern eine gewisse Größe erreicht hat, wird die Installation der Rechner schnell zur Qual. Während es bei ein paar PCs noch kein großes Problem darstellt, mal eben diese und jene Anwendung zu installieren, wird dies bei größeren Netzwerken zu einer Mammutaufgabe. Allzu schnell sind die Administratoren nur noch dabei, von PC zu PC zu laufen und per Hand die richtige Software zu installieren. Zielsetzung dieser Diplomarbeit ist es, Methoden, Verfahren und Tools der Softwareverteilung vorzustellen. Wie der Titel vermuten lässt, soll dabei neben den theoretischen Grundlagen auch die Praxis nicht zu kurz kommen. Die theoretischen und praktischen Ausführungen erheben dabei nicht den Anspruch auf Vollständigkeit. Die Arbeit möchte dabei die folgende Frage beantworten: Wie kriege ich die Installation von Anwendungen und Rechnern über das Netzwerk automatisiert und was muss ich dafür tun und beachten? Gang der Untersuchung: Die vorliegende Arbeit ist grob in die drei Bereiche Grundlagen, Kernkomponenten der Softwareverteilung und Verschiedenes unterteilbar. Im ersten Teil werden die Grundlagen der Softwareverteilung erklärt und ein erster Überblick über das Thema gegeben. Dabei wird versucht, einen theoretischen Rahmen für das Thema Softwareverteilung zu schaffen. Hierzu werden einige der interessantesten Ansätze vorgestellt. Auch wird hier eine erste Untergliederung in die Teilbereiche Betriebssysteminstallation und Ergänzungsinstallationen vollzogen. Der zweite Teil der Arbeit beschäftigt sich mit den Kernkomponenten der Softwareverteilung. Dies sind die Installation und Paketierung von Software, die automatisierte Installation und Konfiguration von Betriebssystemen und die Verteilung dieser Pakete und Betriebssysteme über das Netzwerk. Kapitel zwei hat die Installation von Software zum Thema. Es werden Verfahren vorgestellt, wie sich die Installation und Konfiguration von Software automatisieren lässt. Zusätzlich werden hier Praxisbeispiele zu den wichtigsten Verfahren gegeben und an Beispielen

Free and Open Source Software (FOSS) and other Alternative License Models Axel Metzger, 2015-11-30 This book discusses the main legal questions raised by free and open source software FOSS licenses and other alternative license models such as Creative Commons The legal questions raised by FOSS and other alternative licenses have been the subject of an intense international debate among legal scholars and practising lawyers in the last years Courts in different jurisdictions have confirmed that the core features of FOSS licenses are compliant with the respective applicable laws and thus enforceable in the respective jurisdictions What is still missing so far is an in depth comparative analysis of the legal issues raised by FOSS Creative Commons and other alternative license on a worldwide scale This book presents a general report on FOSS licenses and alternative license models to establish common ground and enable comparison between jurisdictions The general report is followed by 24 national reports covering the world's most important IT markets General and national reports use the same structure to facilitate the comparison The book shows that despite the differences in their origins all FOSS projects use detailed licenses for the organisation of their communities It also shows the differences in the proofing of these licenses by courts in some jurisdictions and the tailor made provisions established by some legislators to solve the legal issues raised by the license model

A System-Theoretic Safety

Engineering Approach for Software-Intensive Systems Asim Ali Ahmed Abdulkhaleq, 2017-02-23 Software safety is a crucial aspect during the development of modern safety critical systems However safety is a system level property and therefore must be considered at the system level to ensure the whole system s safety In the software development process formal verification and functional testing are complementary approaches which are used to verify the functional correctness of software however even perfectly reliable software could lead to an accident The correctness of software cannot ensure the safe operation of safety critical software systems Therefore developing safety critical software requires a more systematic software and safety engineering process that enables the software and safety engineers to recognize the potential software risks For this purpose this dissertation introduces a comprehensive safety engineering approach based on STPA for Software Intensive Systems called STPA SwISs which provides seamless STPA safety analysis and software safety verification activities to allow the software and safety engineers to work together during the software development for safety critical systems and help them to recognize the associated software risks at the system level
