L Edit allows the user to implement the physical design of an integrated circuit at the silicon level and provides output for circuit simulation on SPICE. The entire process of chip design, once the exclusive province of workstation based CAD systems, can now be performed on a PC. Database files for many standard MOSIS CMOS processes are provided on disk, including Orbit and HP 2.0 and 1.2 micron technology base definitions. The program provides for circuit extraction, translating the layout to a SPICE compatible text file, and design rule checking using predefined MOSIS rules or custom designed sets. It also features a unique cross sectional viewer that constructs the side view layering from the layout; this viewer helps users visualize the link between layout drawings and the device structure. Circuit designs created on the Student Version of L Edit can be translated to GDS II or CIF format for submission to a fabrication foundry using the Professional Version of L Edit.
