Student Exploration: Gravitational Force

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: force, gravity, vector

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

On the night of a Full Moon, Mary decides to do an experiment with **gravity**. At midnight, she climbs into her backyard tree house, leans out the window, and holds an acorn as high as she can. She lets go and is disappointed to see the acorn plummet back down to Earth.

1. Why did the acorn fall to Earth instead of rising up to the Moon?

The acorn fell to earth instead of rising up to the moon because the gravitational force of earth was stronger. It was pulled down by earth's gravity.

2. Give two reasons why we feel Earth's gravity more strongly than the Moon's gravity.

We feel earth's gravity more strongly than the moon's gravity because earth's mass is bigger than the mass of the moon (stronger gravitational force) and we are closer to earth.

Gizmo Warm-up

From acorns to apples, gravity causes nearly any object to fall to Earth's surface. Gravity also causes the Moon to orbit Earth and Earth and the other planets to orbit the Sun. The *Gravitational Force* Gizmo allows you to explore the factors that influence the strength of gravitational force.

To begin, turn on the **Show force vector** checkboxes for objects A and B. The arrows coming from each object are **vectors** that represent gravitational **force**. The length of each vector is proportional to the force on each object.

1. Move object **A** around. As object **A** is moved, what do you notice about the direction of the two force vectors?

As I move object A around, I notice that the two forces are always facing each other, object B always points to object A and object A always points to object B.

2. How do the lengths of the two vectors compare?

Both lengths change based on force. When they are closer together the length is longer, and shorter when they are farther apart.

3. Drag object **A** closer to object **B**. How does this change the gravitational force between the two objects?

The gravitational force between the two objects increases due to the decrease in their distance.
