Risk-Based Thinking Tony Muschara, 2017-11-13 Society at large tends to misunderstand what safety is all about It is not just the absence of harm When nothing bad happens over a period of time how do you know you are safe In reality safety is what you and your people do moment by moment day by day to protect assets from harm and to control the hazards inherent in your operations This is the purpose of risk based thinking the key element of the six building blocks of Human and Organizational Performance HOP Generally HOP provides a risk based approach to managing human performance in operations But specifically risk based thinking enables foresight and flexibility even when surprised to do what is necessary to protect assets from harm but also achieve mission success despite ongoing stresses or shocks to the operation Although you cannot prepare for every adverse scenario you can be ready for almost anything When risk based thinking is integrated into the DNA of an organization s way of doing business people will be ready for most unexpected situations Eventually safety becomes a core value not a priority to be negotiated with others depending on circumstances This book provides a coherent perspective on

what executives and line managers within operational environments need to focus on to efficiently and effectively control learn and adapt

Dekker,2017-10-19 Work has never been as safe as it seems today Safety has also never been as bureaucratized as it is today Over the past two decades the number of safety rules and statutes has exploded and organizations themselves are creating ever more internal compliance requirements At the same time progress on safety has slowed to a crawl Many incident and injury rates have flatlined Worse excellent safety performance on low consequence events tends to increase the risk of fatalities and disasters Bureaucracy and compliance now seem less about managing the safety of the workers we are responsible for and more about managing the liability of the people they work for We make workers do a lot that does nothing to improve their success locally Paradoxically such tightening of safety bureaucracy robs us of exactly the source of human insight creativity and resilience that can tell us how success is actually created and where the next accident may well happen It is time for Safety Anarchists people who trust people more than process who rely on horizontally coordinating experiences and innovations who push back against petty rules and coercive compliance and who help recover the dignity and expertise of human work **Health and Safety, Environment and Quality Audits** Stephen Asbury,2023-11-20
