Unfinished Quest Clair T. Berube, 2008-06-01 Modern educators are currently ideologically in one of two camps those who see American education as heading in the right direction and those who fear that it has gone tragically astray For over 100 years the American educational system has been the hope of those who want to level the playing field of opportunity yet today we continue to lag behind several industrialized countries when comparing standardized science test scores Is this acceptable in the most advanced affluent country on earth Why are we not the reigning educational system on the planet And are standardized test scores even the best way to assess the type of learning it takes to lead the world in science achievement The nature of science does not lend itself well to bubble tests yet these assessments are all we have to prove that our students are good scientists This book was born of a science teacher s frustration brought on by the standardized testing movement s reliance on high stakes tests as the sole measurement tool with which to measure achievement Science by its very nature relies on original thinking for discovery and innovation How can this be measured by a bubble test And how do these high stakes tests affect minorities girls those with disabilities and at risk students September 11 2001 alerted us that we Americans can be less creative than our enemies an unprecedented event in American history What if changing the way we teach and assess science learning better prepares our citizens for creative preventions and solutions to world problems instead of creating citizens who have to react to world problems The nature of science begs a better way

Taking Sides in Social Research Martyn Hammersley,2005-08-12 In the past it

was generally taken for granted that the goal of social research was the production of objective knowledge and that this required a commitment to value neutrality. In more recent times however both these ideals have come to be challenged and it is often argued that all research is inevitably political in its assumptions and effects. In this major contribution to the debate Martyn Hammersley assesses the arguments from the classic and still influential contributions of C Wright Mills, Howard Becker and Alvin Gouldner to the present day. He concludes that the case for partisanship is not convincing and that an intelligent and sceptical commitment to the principles of objectivity and value neutrality must remain an essential feature of research.

Developing Moral Sensitivity Deborah Mower, Wade L. Robison, Phyllis Vandenberg, 2015-05-15

Moral sensitivity affects whether and how we see others, note moral concerns, respond with delicacy and navigate complex social interactions. Scholars from a variety of fields explore the concept of moral sensitivity and how it develops, beginning with a natural moral capacity for sensitivity towards others that is shaped in a variety of ways through relationships, forms of teaching and social institutions. Each of these influences alters the capacity as well as one's responses in complex ways. The concept of moral sensitivity deepens as progressive chapters demonstrate its increasing complexity through development within individuals over time as they mature and as their relationships and social contexts expand. The chapters integrate research from philosophy, psychology, neuroscience, literature, education and media and technology studies with key chapters by Darcia Narvaez, Nancy E. Snow, Michael S. Pritchard and Stephen J. Thoma and a Foreword by Owen Flanagan. It is the only comprehensive presentation of interdisciplinary work on moral sensitivity that integrates a theoretical, methodological and pedagogical analysis. This highly interdisciplinary approach provides a new way of thinking about the relationship of individuals to society and moral sensitivity as a social phenomenon, extending current research in ethics, moral psychology and psychology towards situated, embodied and contextual analyses.
