Taks Connection Diagnostics Series Science 5:

From Diagnostics to Learning Success Klaus Beck, 2013-06-12 Accelerated substantial progress regarding many fields of production and services imposes pressure upon the labor market. Employers are desperately looking for skilled workers in nearly all technological fields. All over the world this pressure reaches the national systems of vocational education and training. Along with the output orientation, new standards are imposed, forcing firms and schools to make every endeavor to improve and remodel their programs as well as their practices to reach more and more ambitious goals. To be successful, they need the results of scientific research from which they demand reliable information on methods to diagnose the state and learning progress of students and on means to foster and promote competencies of heterogeneous groups of learners. The book offers 22 state-of-the-art articles covering the central fields of vocational education and training and reporting on new and adequate ways to deal with these challenges.

Personality Assessment in the DSM-5 Steven K. Huprich, Christopher J. Hopwood, 2014-10-29 The DSM 5 promises to be a major reformulation of psychopathology and no section is likely to change diagnostic practice more than that of personality pathology. Unlike the DSM IV, the DSM 5 personality disorders will be conceptualized as involving core deficits in interpersonal and self functioning and will utilize a hybrid assessment model involving both pathological trait dimensions and a limited set of personality disorder types. These changes are based on empirical and theoretical work conducted during the era of DSM III-IV but nevertheless there is significant disagreement among personality assessors regarding the DSM 5 proposal. In this volume, several members of the DSM 5 work group offer rationales for the proposal and offer empirical evidence regarding suggested changes and several personality assessment researchers critique the proposal and offer alternative conceptualizations. This book was originally published as a special issue of the *Journal of Personality Assessment*.

The Diagnostic System Jason Schnittker, 2017-08-08 Mental illness is many things at once. It is a natural phenomenon that is also shaped by society and culture. It is biological but also behavioral and social. Mental illness is a problem of both the brain and the mind and this ambiguity presents a challenge for those who seek to accurately classify psychiatric disorders. The leading resource we have for doing so is the American Psychiatric Association's *Diagnostic and Statistical Manual*, but no edition of the manual has provided a decisive solution and all have created controversy. In *The Diagnostic System*, the sociologist Jason Schnittker looks at the multiple actors involved in crafting the DSM and the many interests that the manual hopes to serve. Is the DSM the best tool for defining mental illness? Can we insure against a misleading approach? Schnittker shows that the classification of psychiatric disorders is best understood within the context of a system that involves diverse parties with differing interests. The public wants a better understanding of personal suffering. Mental health professionals seek reliable and treatable diagnostic categories. Scientists want definitions that correspond as closely as possible to nature. And all parties seek definitive insight into what they regard as the right target. Yet even the best classification system cannot satisfy all of these interests simultaneously. Progress toward

an ideal is difficult and revisions to diagnostic criteria often serve the interests of one group at the expense of another Schnittker urges us to become comfortable with the socially constructed nature of categorization and accept that a perfect taxonomy of mental health disorders will remain elusive Decision making based on evolving though fluid understandings is not a weakness but an adaptive strength of the mental health profession even if it is not a solid foundation for scientific discovery or a reassuring framework for patients
