Competent business leadership drives profit but there is more and it is important to know especially during these trying times. If business leadership is practiced with a value based foundation its demonstrated impact on business performance is much greater. As human beings are the most treasured business asset business leaders practice values that maintain the asset by creating relationship harmony and trust fostering collaborative learning to realize individual and collective potential and developing the organization as a united community. But a business leadership model must also reflect respect for the unique cultural context in which the business operates which is why author Stanley Remple argues the need for improved development of Chinese business leadership development. The dominant individualistic and technical Western approach to and practice of leadership development doesn't serve the needs of Chinese business leaders very well. And it creates new avoidable challenges. Enter *Leadership Wisdom for Businesses in China* a powerful four book series that examines natural law based values for business leadership within the rich Chinese traditional and current cultural context. Remple offers a framework to promote individual and collective potential while creating a successful and competitive business as community. Based on these values Remple outlines ten key leadership responsibility areas and supporting operating principles for each responsibility area to realize business leadership improvements. Much more than a theoretical overview of business leadership this book series offers a roadmap for developing both self leadership and business leadership within a whole company. Both are essential. Emerging Trends in Systems Engineering Leadership Alice F. Squires, Marilee J. Wheaton, Heather J. Feli, 2022-11-06

This book celebrates the efforts of women in the international systems engineering community. While there are dozens of books that tackle the topic of systems engineering and thousands of books that address leadership, this book is unique. *Emerging Trends in Systems Engineering Leadership: Practical Research from Women Leaders* presents personal well-researched hands-on perspectives of emerging trends in systems engineering leadership from industry, government, and academia, covering timely topics applicable across many domains all under one cover. This book presents material for engineers, scientists, technologists, and others to help them tackle challenges in their everyday work dealing with complex socio-technical systems. The book provides guidance for leaders on shoring up essential soft skills to address the increasing demand for professional competencies, addresses diversity, equity, inclusion, and empowering women in the workforce, discusses broader facets of systems engineering leadership, including systems thinking, ethics, and utilitarianism, and investigates the impact of emerging technological change on systems resilience and the digital enterprise. This book provides a multi-perspective approach for leaders to navigate a changing world and develop and deliver optimal system solutions to global societal challenges that meet human needs. To this end, the authors extend beyond the solid technical base to encompass the human aspect of system behavior. This book is written by twenty-six female authors, three of whom also serve as the editors, from around the world at varying career stages who share their research achievements, perspectives, and successes in emerging areas of systems engineering leadership.

Testimonials

As the systems that modern society depends on get more complicated and complex, we are in the midst of a renaissance with regard to research relating to systems engineering and science. A vast majority of this research is focused on the development of a modern toolkit for systems engineers today and into the future. This takes the form of new and improved methods, models, methodology, processes, and tools. This research is critical but likely insufficient without a focus on the most valuable resource with regard to systems engineering within any organization: the human resource. Therein lies the focus of this textbook. It addresses systems engineering leadership from a variety of perspectives while also addressing broad aspects relating to mentoring and the necessary evolving competencies that we need to address in today's workforce. This emphasis makes this book unique. The icing on the cake is that all the chapters in this textbook are written by contemporary women leaders; this provides a necessary and unique perspective on the topic of leadership that is long overdue. I highly recommend this textbook to all my colleagues in academia, industry, and government.
