

The Reaper

Owners Manual

201001

Foreword

The Reaper is a combine harvester designed to harvest on a 14" combine with engine up to 100hp. This manual will help you get maximum performance as well as longevity of the components. This is a safety manual and should not be used in any application other than harvesting. Maximum drive is for use in stock and water stock areas. Stock drive is required on combine mounting for 2 stroke timing and on limited and limited stock areas on 4 stroke timing. The Reaper must feature Oxygen treatment in all critical components for superior performance, cooling, and longevity.

Starting

When engine starts the clutch and drive must open at high speeds if there is not a clutch. **Never** operate vehicle without proper guards in place. **Never** attempt to adjust, repair, or lubricate while with engine running.

Start Speed

Start speed is the RPM that the clutch takes up with. For top performance it is important to adjust the clutch and speed to match the peak torque of the engine. This allows the engine to operate within its maximum power band for greater efficiency.

Start Speed Chart

After for installing the clutch into the engine it is important to record the correct engine and spring combination for the drive. This chart is a guideline only as various engineering combinations can produce very close results.

Note: Stock Drive required on combine mounted clutch and 14" and 16" and 18" engines

Installation

When space allowed it is better to mount the clutch instead of mounting the engine. However spring adjustment can be accomplished without removing the clutch. Mounting the clutch instead requires the optional spacer kit and 40000" for proper clearance between the drive and the side of the engine.

Steps for standard installation:

1. Check if there is any space between the drive and the side of the engine.
2. Check if there is any space between the drive and the side of the engine.
3. Check if there is any space between the drive and the side of the engine.
