unique benefits of fossil fuels to human flourishing including their unrivaled ability to provide low cost reliable energy to billions of people around the world especially the world's poorest people And contrary to what we hear from media experts about today's renewable revolution and climate emergency reality has proven Epstein right Fact Fossil fuels are still the dominant source of energy around the world and growing fast while much hyped renewables are causing skyrocketing electricity prices and increased blackouts Fact Fossil fueled development has brought global poverty to an all time low Fact While fossil fuels have contributed to the 1 degree of warming in the last 170 years climate related deaths are at all time lows thanks to fossil fueled development What does the future hold In Fossil Future Epstein applying his distinctive human flourishing framework to the latest evidence comes to the shocking conclusion that the benefits of fossil fuels will continue to far outweigh their side effects including climate impacts for generations to come The path to global human flourishing Epstein argues is a combination of using more fossil fuels getting better at climate mastery and establishing energy freedom policies that allow nuclear and other truly promising alternatives to reach their full long term potential Today's pervasive claims of imminent climate catastrophe and imminent renewable energy dominance Epstein shows are based on what he calls the anti impact framework a set of faulty methods false assumptions and anti human values that have caused the media's designated experts to make wildly wrong predictions about fossil fuels climate and renewables for the last fifty years Deeply researched and wide ranging this book will cause you to rethink everything you thought you knew about the future of our energy use our environment and our climate

The Economic Superorganism Carey W. King, 2020-10-07 Energy drives the economy economics informs policy and policy affects social outcomes Since the oil crises of the 1970s pundits have debated the validity of this sequence but most economists and politicians still ignore it Thus they delude the public about the underlying influence of energy costs and constraints on economic policies that address such pressing contemporary issues as income inequality growth debt and climate change To understand why Carey King explores the scientific and rhetorical basis of the competing narratives both within and between energy technology and economics Energy and economic discourse seems to mirror Newton's 3rd Law of Motion For every narrative there is an equal and opposite counter narrative The competing energy narratives pit drill baby drill against renewable technologies such as wind and solar Both claim to provide secure reliable clean and affordable energy to support economic growth with the most benefit to society but how To answer this question we need to understand the competing economic narratives techno optimism and techno realism Techno optimism claims that innovation overcomes any

physical resource constraints and enables the social outcomes and economic growth we desire Techno realism in contrast states that no matter what energy technologies we use feedbacks from physical growth on a finite planet constrain economic growth and create an uneven distribution of social impacts In *The Economic Superorganism* you will discover stories data science and philosophy to guide you through the arguments from competing narratives on energy growth and policy You will be able to distinguish the technically possible from the socially viable and understand how our future depends on this distinction

The Case for Climate Capitalism Tom Rand, 2020-03-03 A call for the Left and Right the business community and environmentalists bankers and activists to join together reclaim capitalism and force profits to align with the planet A warming climate and a general distrust of Wall Street has opened a new cultural divide among those who otherwise agree we must mitigate climate risk anti market critics such as Naomi Klein target capitalism itself as a root cause of climate change while climate savvy business leaders believe we can largely continue with business as usual by tinkering around the edges of our economic system Rand argues that both sides in this emerging cultural war are ill equipped to provide solutions to the climate crisis and each is remarkably naïve in their view of capitalism On one hand we cannot possibly transition off fossil fuels without the financial might and entrepreneurial talent market forces alone can unlock On the other without radical changes to the way markets operate capitalism will take us right off the climate cliff Rejecting the old Left Right ideologies Rand develops a more pragmatic view capable of delivering practical solutions to this critical problem A renewed capitalism harnessed to the task is the only way we might replace fossil fuels fast enough to mitigate severe climate risk If we leave our dogma at the door Rand argues we might just build an economy that survives the century

Thinking Through Climate Change Adam Briggie, 2020-10-19 In this creative exploration of climate change and the big questions confronting our high energy civilization Adam Briggie connects the history of philosophy with current events to shed light on the Anthropocene the age of humanity Briggie offers a framework to help us understand the many perspectives and policies on climate change He does so through the idea that energy is a paradox changing sameness From this perennial philosophical mystery he argues that a high energy civilization is bound to create more and more paradoxes These paradoxes run like fissures through our orthodox picture of energy as the capacity to do work and control fate Climate change is the accumulation of these fissures and the question is whether we can sustain technoscientific control and economic growth It may be that our world is about change radically imploring us to start thinking heterodox thoughts

Hearing on the Nominations of Kathleen Hartnett White to be Member of the Council on Environmental Quality and

Andrew Wheeler to be Deputy Administrator of the Environmental Protection Agency United States. Congress. Senate. Committee on Environment and Public Works, 2017 The Republican Reversal James Morton Turner, Andrew C. Isenberg, 2018-11-12 Not long ago Republicans could take pride in their party's tradition of environmental leadership. In the late 1960s and early 1970s the GOP helped to create the Environmental Protection Agency, extend the Clean Air Act and protect endangered species. Today as Republicans denounce climate change as a hoax and seek to dismantle the environmental regulatory state they worked to build, we are left to wonder: What happened? In *The Republican Reversal*, James Morton Turner and Andrew C. Isenberg show that the party's transformation began in the late 1970s with the emergence of a new alliance of pro-business libertarian and anti-federalist voters. This coalition came about through a concerted effort by politicians and business leaders, abetted by intellectuals and policy experts, to link the commercial interests of big corporate donors with states' rights activism and Main Street regulatory distrust. Fiscal conservatives embraced cost-benefit analysis to counter earlier models of environmental policy making, and business tycoons funded think tanks to denounce federal environmental regulation as economically harmful, constitutionally suspect, and unchristian, thereby appealing to evangelical views of man's God-given dominion of the Earth. As Turner and Isenberg make clear, the conservative abdication of environmental concern stands out as one of the most profound turnabouts in modern American political history, critical to our understanding of the GOP's modern success. The Republican reversal on the environment is emblematic of an unwavering faith in the market, skepticism of scientific and technocratic elites, and belief in American exceptionalism that have become the party's distinguishing characteristics.

The Disaster Resiliency Challenge James Bohland, Jack Harrauld, Deborah Brosnan, 2018-08-27 Resilience as a concept has become embedded in public policy discourse within countries across the world in a wide range of contexts: planning, education, emergency management, and supply chains. The goal of this book is to assist future community leaders and professionals with the subsystem components and the actions that must be taken to insure community resilience and to alert them to the potential pitfalls when adapting their community to the challenges that continually change. The development of trust among and between diverse members of communities and the political and economic leaders is essential if our views of how to build resilience are to change. The book is divided into five sections. The first section explores the challenges of transformational change: building community resilience with alternative frameworks and resilience in time and space with lessons from ecology. Section II covers the building of hazard resilient communities through technology, microscale disaster, and local resilience: the building of resilient cities by harnessing the power of urban analytics and the failure to describe and communicate the possible future climate change scenarios. Section III examines challenges for urban theory when conceptualizing financial resilience: the role of social capital in community disaster resilience, the challenges of citizen engagement, and resilience in the Dutch disaster management and the rationalities of extraction and resilience of fossil fueling vulnerability in an age of extreme energy. Section IV explores shifting from risks to

consequences when building resilience to mega hazards resilience and small island nations the sea level rise demographics and rural resilience on Maryland s Eastern shore and the epicenter of community resilience in the California s San Francisco Bay Area Section V discusses observations and challenges on building community resilience in the twenty first century This highly informative and indispensable volume will be meaningful for future community leaders citizens stakeholders government officials emergency management and crisis interveners

The Moral Case for Profit Maximization Robert White,2020-04-01 The Moral Case for Profit Maximization argues that profit maximization is moral when businessmen seek to maximize profit by creating goods or services that are of objective value Traditionally profit maximization has been defended on economic grounds Profit economists argue incentivizes businessmen to produce goods and services In this view businessmen do not need to be virtuous as long as they deliver the goods It challenges the traditional defense of profit maximization arguing that profit maximization is morally ambitious because it requires businessmen to form normative abstractions and to cultivate a virtuous character In so doing the author also challenges the moral basis of corporate social responsibility Proponents of CSR argue that businessmen can do good while doing well This book argues that businessmen already do good by maximizing profit drawing upon the histories of the wheel the refrigerator and the shipping container as well as the biographies of J P Morgan John D Rockefeller and Thomas Edison to demonstrate the role of values in the creation of material goods and the role of the virtues in value creation The author challenges readers to rethink the relationship between profit value and virtue

Transformative Climates and Accountable Governance Beth Edmondson,Stuart Levy,2018-09-25 This book explores the real world consequences changing ideas and strategies have on effective climate governance Its main focus is on why accountability matters both for transformations and transitions in international climate change governance and how international support for environmentally responsible actions and extending shared accountabilities might strengthen climate governance globally A main point of discussion is if and how better understanding of accountabilities and transformations in ecosystems dynamics the capacities of organisms to adapt migrate or otherwise respond to environmental or climatic changes can improve climate governance mechanisms Bringing together a diverse set of considerations from various fields of study chapters examine responses to environmental transformations that occur during periods of climatic crisis such as species depletion industrialisation de industrialisation or urbanisation Throughout this book aims to further readers understanding of if or how accountable climate governance can reduce the risks of global political disorder and widespread conflict in the 21st century arising from environmental transformations of depleted forests re routed waterways coastlines impacted by sea level rises changed rainfall patterns and industrial practices

The Winning of the Carbon War Jeremy Leggett,2018-02-15 *Phytoremediation Potential of Bioenergy Plants* Kuldeep Baudh,Bhaskar Singh,John Korstad,2017-03-29 The globally escalating population necessitates production of more goods and services to fulfil the expanding demands of human beings which resulted in urbanization and industrialization

Uncontrolled industrialization caused two major problems energy crisis and accelerated environmental pollution throughout the world Presently there are technologies which have been proposed or shown to tackle both the problems Researchers continue to seek more cost effective and environmentally beneficial pathways for problem solving Plant kingdom comprises of species which have the potential to resolve the couple problem of pollution and energy Plants are considered as a potential feedstock for development of renewable energy through biofuels Another important aspect of plants is their capacity to sequester carbon dioxide and absorb degrade and stabilize environmental pollutants such as heavy metals poly aromatic hydrocarbons poly aromatic biphenyls radioactive materials and other chemicals Thus plants may be used to provide renewable energy generation and pollution mitigation An approach that could amalgamate the two aspects can be achieved through phytoremediation using plants to clean up polluted soil and water and subsequent generation of energy from the phyto remediator plants This would be a major advance in achieving sustainability that focuses on optimizing people social issues planet environmental issues and profit financial issues The Phytoremediation Cellulosic Biofuels PCB process will be socially beneficial through reducing pollution impacts on people ecologically beneficial through pollution abatement and economically viable through providing revenue that supplies an energy source that is renewable and also provides less dependence on importing foreign energy energy independence The utilization of green plants for pollution remediation and energy production will also tackle some other important global concerns like global climate change ocean acidification and land degradation through carbon sequestration reduced emissions of other greenhouse gases restoration of degraded lands and waters and more This book addresses the overall potential of major plants that have the potential to fulfil the dual purposes of phytoremediation and energy generation The non edible bioenergy plants that are explored for this dual objective include *Jatropha curcas* *Ricinus communis* *Leucaena leucocephala* *Milletia pinnata* *Canabis sativa* *Azadirachta indica* and *Acacia nilotica* The book addresses all possible aspects of phyto remediaton and energy generation in a holistic way The contributors are one of most authoritative experts in the field and have covered and compiled the best content most comprehensively The book is going to be extremely useful for researchers in the area research students academicians and also for policy makers for an inclusive understanding and assessment of potential in plant kingdom to solve the dual problem of energy and pollution

Carbon Capital Sean Field, 2025-08-26 Surprising insights into the worldviews of oil and gas financiers It is no secret that the fossil fuel industry whose products power modern America both physically and financially inflicts immense destruction to our environment The past present and future of US energy have been determined not just by engineers but by financiers an under studied group of energy investors Drawing on four years of ethnographic work in Houston Texas the financial center of the oil industry Carbon Capital explores how oil financiers decide what a good investment is and how they incorporate ethics into their decision making While many who are concerned about climate change see those involved in the gas and oil industries as immoral profit chasers who do not care about the environment the

author finds that this is not the case His interviews and observations demonstrate that the people who finance the energy industries are actually deeply concerned with ethics They grapple with questions about climate change and what it means to do the right thing but the choices they make are ultimately guided by a combination of how they perceive the historical context in which they operate their faith which is largely religious Christian their financial interests plus the capitalist system in which they are running all of which come together to shape their moral understandings about what a good energy future looks like While the worldview of oil financiers may not align with our own the author argues that given their importance in shaping environmental approaches it is crucial that we understand what drives their ethical sensibilities **Continued**
