Perspectives in Business Informatics Research Peter Forbrig, Horst Günther, 2010-09-21. The conference series BIR Business Informatics Research was established 10 years ago in Rostock as an initiative of researchers from Swedish and German universities. The objective was to create a global forum where researchers in business informatics seniors as well as juniors could meet, collaborate, and change ideas. Over the years, BIR has matured into a series of international conferences typically organized in the Baltic Sea region, including Norway and Iceland. A steering committee ensures the high quality of the BIR proceedings. We are very proud that this year an international and very well known editor has agreed to publish selected papers of the conference. The interest in the conference in terms of submissions and participation has steadily increased over the years. This year we received 53 contributions, among which 14 submissions were accepted as long papers and 4 as short papers. A few additional contributions were invited for presentation at the conference. The selection was carefully carried out by an International Program Committee. The result is a set of interesting and stimulating papers that address important issues such as knowledge management, ontologies, models, workflow specifications, databases, and OLAP. The conference was opened by an invited technical talk by Dr. Klaus Brunnstein from The University of Hamburg, who discussed the topic "The Information Society on the Way to Web 3.0: Perspectives, Opportunities, and Risks," which is challenging for all of us.

XML-Based Data Management and Multimedia Engineering - EDBT 2002 Workshops Akmal B. Chaudhri, Chabane Djeraba, Rainer Unland, Wolfgang Lindner, 2002-11-19. This volume comprises papers from the following three workshops that were part of the complete program for the International Conference on Extending Database Technology (EDBT) held in Prague, Czech Republic, in March 2002: XML-Based Data Management (XMLDM), Second International Workshop on Multimedia Data and Document Engineering (MDDE), and Young Researchers Workshop (YRWS). Together, the three workshops featured 48 high-quality papers selected from approximately 130 submissions. It was therefore difficult to decide on the papers that were to be accepted for presentation. We believe that the accepted papers substantially contribute to their particular fields of research. The workshops were an excellent basis for intense and highly fruitful discussions. The quality and quantity of papers show that the areas of interest for the workshops are highly active. A large number of excellent researchers are working in relevant fields, producing

research output that is not only of interest to other researchers but also for industry The organizers and participants of the workshops were highly satisfied with the output The high quality of the presenters and workshop participants contributed to the success of each workshop The amazing environment of Prague and the location of the EDBT conference also contributed to the overall success Last but not least our sincere thanks to the conference organizers the organizing team was always willing to help and if there were things that did not work assistance was quickly available
