Handbook of Immune Response Genes Tak W. Mak, John J. L. Simard, 2007-07-27 The study of immunology encompasses a vast and ever growing body of information that in some way or other incorporates most areas of medical biological research As the body of information in the medical sciences continues to increase its rate of expansion one of the greatest challenges to investigators will be to integrate this information in a manner that is intellectually fruitful and productive Considering the intended scope of this text we could not pretend to have gone too far toward achieving such an integration and considering the pace of change in its very best form a measured approximation of such lofty goals might be the most we could hope for Nevertheless in these pages we have sought to produce a collection of information that is at once concise and up to date regarding areas where important developments are impacting on the way we understand the vertebrate immune system In addition although the information is geared toward advanced study we have discussed some basic elements and concepts that we hope make the text a useful resource for both the immunologist and the nonspecialist The intention is to provide the researcher clinician or advanced undergraduate student with a brief overview of specific components of the immune system and to provide a place from which to begin further detailed study if necessary To this end we made every effort to supply extensive referencing although limitations in space prevented exhaustive or complete referencing in some cases A Textbook of Immunology Latha, Madhavee P., 2012 A TEXTBOOK OF IMMUNOLOGY
