

Figure 3.3.5

3.3.6 INSPECT CONTACT POINTS

A. Primary Contact Points (All Magnetos)

NOTE: In a retard breaker magneto, the primary contact points are secured by a **BLACK** anodized screw.

1. Inspect primary contact points for signs of pitting and discoloration. If points are not discolored and have a white, frosty surface around the edges, points are functioning properly and can be reused.
2. If points are blue (indicating excessive arcing) or pitted, they should be discarded. Replace primary contact point assembly, condenser and cam.

B. Retard Breaker Contact Points (Retard Breaker Magnetos Only)

NOTE: In a retard breaker magneto, the retard breaker contact points are secured by a **SILVER** screw.

1. Inspect retard breaker contact points for signs of pitting and discoloration. If points are not discolored and have a white, frosty surface around the edges, points are functioning properly and can be reused.
2. If points are blue (indicating excessive arcing) or pitted, they should be discarded. Replace retard breaker contact point assembly and cam.

C. Tachometer Drive Contact Points (Tachometer Drive Magnetos Only)

1. Inspect tachometer drive contact points for signs of pitting and discoloration. If points are not discolored and have a white, frosty surface around the edges, points are functioning properly and can be reused.

2. If points are blue (indicating excessive arcing) or pitted, they should be discarded. Replace tachometer drive contact point assembly and cam.

3.3.7 INSPECT CONDENSER

A. Clean Condenser

1. If the external surfaces of the condenser are dirty, clean with light soapy water.
2. Rinse soapy water and dirt from condenser surfaces with clear water and pat dry before reinstallation into the magneto housing.

B. Condenser Inspection

1. Inspect the condenser for signs of corrosion. This condition is cause for component rejection. (See Figure 3.3.7).

Figure 3.3.7

3. Inspect the condenser P-lead stud for twisting or "pulled" condition. Using a magnifying lens, examine the glass bead end seats of the capacitor for broken glass or for glass separation from the retaining steel rings. Either of these conditions is cause for component rejection. (See Figure 3.3.7A.)
2. Inspect the condenser wire for chafing, frayed insulation, or exposed wires that could contact frame. Replace as necessary.

NOTE: Current condenser design utilizes a D shaped insulator to prevent damage from Over-Torquing of P-lead stud.
