Smart Environments Technology Protocols And Applications:

Smart Environments Diane J. Cook, Sajal Kumar Das, 2005 Intelligent environments are revolutionizing the ways in which people live work and play Such an environment typically called a smart environment is a small specialized world where all kinds of devices work together to make inhabitants lives more comfortable These environments are as varied and individualized as the people who live there with technologies that range from safety and security systems to robotic lawn mowers to intelligent cars kitchens and more The interdisciplinary scope of the field integrates aspects of machine learning human machine interfacing wireless networking mobile communications sensor networks and pervasive computing *Smart Environments* explores the state of the art in this exploding field and shows the impact these environments are having in homes offices classrooms hospitals and automobiles It examines everything from design and architecture to health care issues and software engineering is explored and utilized in these far reaching applications With contributions from leading researchers in a wide array of disciplines *Smart Environments* covers such important topics as wireless sensor networks middleware home and office networking and appliances location and estimation techniques automated decision making privacy and security issues assisted environments for individuals with special needs future trends and much more **Smart**

Monekosso, Yoshinori Kuno, Paolo Remagnino, 2008-09-18 Relatively new research elds such as ambient intelligence intelligent environments ubiquitous computing and wearable devices have emerged in recent years These elds are related by a common theme making use of novel technologies to enhance user experience by providing user centric intelligent environments moving computers from the desktop and making computing available anywhere and anytime It must be said

that the concept of intelligent environments is not new and began with home automation. The choice of name for the environment varies somewhat from continent to continent in the English speaking world. In general intelligent space is synonymous to intelligent environments or smart spaces of which smart homes is a sub-eld. In this collection the terms intelligent environments and ambient intelligence are used interchangeably throughout. Such environments are made possible by permeating living spaces with intelligent technology that enhances quality of life. In particular advances in technologies such as miniaturized sensors, advances in communication and networking technology including high bandwidth wireless devices and the reduction in power consumption have made possible the concept of intelligent environments. Environments such as a home, an office, a shopping mall and a travel port utilize data provided by users to adapt the environment to meet the user's needs and improve human-machine interactions. The user information is gathered either via wearable devices or by pervasive sensors or a combination of both. Intelligent environments bring together a number of research fields from computer science such as artificial intelligence, computer vision, machine learning and robotics as well as engineering and architecture.

Workshops Proceedings of the 5th International Conference on Intelligent Environments M. Schneider, A. Kröner, J.E. Alvarado, 2009-10-02. Advances in the engineering of sensing and acting capabilities distributed in a wide range of specialized devices is providing at last an opportunity for the fundamental advances that computer science achieved in the past few decades to make an impact in our daily lives. This technical confluence is matched by a unique historical context where users are better informed, more aware of the benefits that technology can provide and production of more complex systems is becoming more affordable. Sensors/actuators deployed in an environment in this context can be any physical space like a house, office, classroom, car, street etc. facilitate a link between an automated decision making system connected to that technologically enriched space. This computing empowered environment enables the provision of an intelligent environment, i.e. a digital environment that proactively but sensibly supports people in their daily lives. This is an active area of research which is attracting an increasing number of professionals in academia and industry worldwide. The prestigious 5th International Conference on Intelligent Environments IE 09 is focused on the development of advanced intelligent environments and stimulates the discussion on several specific topics which are crucial to the future of the area. As part of that five workshops were supported as part of IE 09. This volume is the combined proceedings of those five workshops: Workshop on Digital Object Memories DOME 09, Workshop on RFID Technology: concepts, practices, solutions RFID 09, Workshop on Artificial Intelligence Techniques for Ambient Intelligence AITAmI 09, Workshop on Ethical Design of Ambient Intelligence EDAmI 09, Workshop on Smart Offices and Other Workplaces SOOW 09.
