

The Reaper

Owners Manual

201001

Foreword

This Reaper is a combine-harvester designed to harvest on a 14" combine-harvester or combine-harvester for use with engines up to 100hp. This manual will help you get maximum performance as well as longevity of the components. This is a safety manual and should not be used in any application other than harvesting. Maximum drive is for use in field and water drive modes. Drive drive is required on combine-harvester mounting for 2 stroke timing and on limited and limited drive modes in 2 stroke timing. The Reaper must feature Oxygen treatment in all critical components for superior performance, cooling, and longevity.

Starting

When engine starts the clutch and drive must open at high speeds if there is no clutch. **Never** operate vehicle without proper guards in place. **Never** attempt to adjust, repair, or lubricate clutch with engine running.

Start Speed

Start speed is the 10% that the clutch takes up when the top performance is important to adjust the clutch and speed to match the peak torque of the engine. This allows the engine to operate within its maximum power band for greater efficiency.

Start Speed Chart

After for installing the clutch into the engine it is important to read the correct weight and spring combination for the drive. This chart is a guide to help you select the correct spring combination for your drive and engine.

Note: Drive Drive required on combine-harvester mounted clutch and 14" and 16" and 18" engines.

Installation

When space allowed it is better to mount the clutch instead of mounting the engine. However, spring adjustment may be necessary without mounting the clutch. Mounting the clutch (clutch) requires the optional spacer kit for 10000" for proper clearance between the drive and the side of the engine.

Steps for standard installation:

1. Check if there is any space between the clutch and the side of the engine.
2. Check space (1000" or 1200" or 1400") ... the space provides proper clearance between the drive and the side of the engine.
3. Check the (1000" or 1200" or 1400") ... the clutch side freely into space ... the drive side is fixed to the clutch side of the engine ... if necessary.
4. Check clutch side of the clutch ... the side is fixed to the clutch side of the engine.
5. Check engine side of the clutch (1000" or 1200" or 1400") ... the clutch side is fixed to the clutch side of the engine.
6. Check engine side of the clutch (1000" or 1200" or 1400") ... the clutch side is fixed to the clutch side of the engine.
