Developments in Surface Contamination and Cleaning Rajiv Kohli, Kashmiri L. Mittal, 2008-01-10 Surface contamination is of cardinal importance in a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical Thus the need to understand the causes of surface contamination and their removal is very patent Generally speaking there are two broad categories of surface contaminants film type and particulates In the world of shrinking dimensions such as the ever decreasing size of microelectronic devices there is an intensified need to understand the behavior of nanoscale particles and to devise ways to remove them to an acceptable level Particles which were functionally innocuous a few years ago are killer defects today with serious implications for yield and reliability of the components This book addresses the sources detection characterization and removal of both kinds of contaminants as well as ways to prevent surfaces from being contaminated A number of techniques to monitor the level of cleanliness are also discussed Special emphasis is placed on the behaviour of nanoscale particles The book is amply referenced and profusely illustrated Excellent reference for a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical A single source document addressing everything from the sources of contamination to their removal and prevention Amply referenced and profusely illustrated

Developments in Surface Contamination and Cleaning, Volume 4 Rajiv Kohli, K. L. Mittal, 2011-10-24 The contributions in this volume cover methods for removal of particle contaminants on surfaces Several of these methods are well established and have been employed in industrial applications for a long time However the ever higher demand for removal of smaller particles on newer substrate materials is driving continuous

development of the established cleaning methods and alternative innovative methods for particle removal This book provides information on the latest developments in this topic area The purpose of the Developments in Surface Contamination and Cleaning series is to provide a state of the art guide to the current knowledge of the behaviour of film type and particulate surface contaminants and cleaning methods Each title has a particular topical focus covering the key techniques and recent developments in the area Taken as a whole the series forms a unique reference for professionals and academics working in the area of surface contamination and cleaning A strong theme running through the series is that of surface contamination and cleaning at the micro and nano scales Covers the latest techniques in areas such as removal of nanoparticles especially important in the semiconductor industry disk drives and microelectronics The series as a whole represents the definitive reference on Surface Contamination and Cleaning An essential reference for industries where cleaning is critical electronics optics pharmaceutical manufacturing etc Treatise on Clean Surface Technology K.L. Mittal,2012-12-06

Contamination Control and Cleanrooms Alvin Lieberman,2012-12-06 Contamination control standards and techniques for all phases of the production of high technology products are spelled out in this applications orientated guide Practical cleaning methods for products and process fluids are accompanied by tips on selecting operations based on economy and efficiency Explanations of contaminant measurement devices cover operation error sources and remedial methods Engineers will find vital data on contaminant sources as well as coverage of operations and procedures that aggravate contaminant effects Contamination Control in Sandia Equation-of-state Experiments W. Intermetallic and Ceramic Coatings Narnedra B. Dahotre,T.S. Sudarshan,1999-02-16 Detailing the properties of specific coatings problems related to adhesion onto various substrates and potential commercial applications this text surveys up to date techniques involved in preparing intermetallic and ceramic coatings The book features a list of selected applications covering the latest industrially available practices **Stable-Nanoemulsions** Joseph D'Arrigo,2011-04-21 This title is a greatly expanded and updated second edition of the original volume published by Elsevier in 1986 New material has been integrated with the original content in an organized and comprehensive manner Five new chapters have been included which review over one and a half decades of research into lipid coated microbubbles LCM and their medical applications The new chapters contain much experimental data which is examined in detail along with relevant current literature This current edition builds on the original work in effectively filling the gap in the market for a comprehensive account of the surfactant stabilization of coated microbubbles Presents updated results from extensive multidisciplinary research on coated microbubbles Greatly expanded and updated 2nd edition with five new chapters Fills the gap for a comprehensive and up to date account of subject matter Testing of Metallic and Inorganic Coatings William B. Harding,1987 Coatings are tested to confirm compliance with specifications to monitor the operation of a coating process and to evaluate coatings for various services The ability of a coating to perform as intended usually depends on several characteristics and the testing of a

coating usually involves several different tests At first glance the nature of a characteristic that is being tested may seem clear and the results of a test may seem to be unambiguous however the nature of a characteristic may be more complex than realized and the ability of a test to measure the characteristic may be less than expected The members of the ASTM Committee B 8 on Metallic and Inorganic Coatings felt it was desirable to organize a symposium on the testing of the metallic and inorganic coatings so as to bring these problems to the attention of practitioners This publication is based on the symposium which was presented in Chicago on April 14 and 15 1986

Free-surface Turbulence and Air-water Gas Exchange Sean Patrick McKenna, 2000 This thesis investigates the physical mechanisms of air water gas transfer through direct measurements of turbulence at the air water interface To enable this study a new approach to the particle image velocimetry PIV technique is developed in order to quantify free surface flows PIV measurements of free surface turbulence are performed with concurrent measurements of gas transfer in a specially constructed oscillating grid stirred tank for a range of turbulent mixing and surface conditions Surface turbulence vorticity divergence and gas transfer are all affected by the presence of a surface film with significant effects realized for relatively small surface pressures Results show that while a relationship between surface turbulence and the gas transfer velocity is an obvious improvement over that found using an estimate of the bulk flow turbulence this relationship is dependent on the flow regime However the data from the grid turbulence experiments and additional data from experiments with waves can be reconciled by a single relationship between the gas transfer velocity and the $1/2$ power of the surface divergence which agrees with previous conceptual models These results demonstrate the important role of surface divergence in air water gas exchange and relate in a physically meaningful way the interactions between surface renewal surfactants and gas transfer
