importance of creating as accurate a process as possible for incapability determinations is underscored by the consequences of incorrectly identifying recipients either as incapable when they can manage their benefits or as capable when they cannot. Failure to identify beneficiaries who are incapable of managing their funds means abandoning a vulnerable population to potential homelessness, hunger, and disease. Informing Social Security's Process for Financial Capability Determination considers capability determination processes used by other similar benefit programs, abilities required to manage and direct the management of benefits, and effective methods and measures for assessing capability. This report evaluates SSA's capability determination process for adult beneficiaries and provides recommendations for improving the accuracy and efficiency of the agency's policy and procedures for making these determinations. **Sustainability in Innovation and**

Entrepreneurship Antonio Leal-Millan, Marta Peris-Ortiz, Antonio L. Leal-Rodríguez, 2017-07-03 This book provides a richly illustrated study of sustainability, innovation, and entrepreneurship. Specifically, it examines the ways in which governmental policies and practices modify the social conditions necessary to promote innovation in businesses and, by so doing, impact economic development. Exploring topics such as green innovation, green customer capital, smart cities, green entrepreneurship, and environmental responsibility, this book presents some of the most current research and best practices in the field. In today's global economy, strategies, policies, and practices that address the negative effects of human activity on the environment need to be incorporated into the business framework in order for companies to achieve a sustainable competitive advantage. Around the world, such changes have already resulted in a broad range of products, production methods, and technical features that ensure environmental protection. At the same time, the mass media's communication of a deteriorating earth has motivated a growing number of citizens in both developed and developing nations to modify their consumption habits towards more ecological products. Consequently, an increasing number of companies are reacting to these changes in business and legal frameworks and consumer preferences by investing in new forms of green innovation or eco-innovation designed to promote both environmental and corporate sustainability. For example, Hewlett-Packard eliminated lead from its welding process, Wal-Mart reduced the emissions of their suppliers, and Cisco, Dell, and IBM are investing in smart grids. This volume showcases pioneering efforts among companies, citizens, and government agencies that are moving from theory to practice by placing sustainability at the core of their development strategies. *Decisions and Orders of the National Labor Relations Board* United States.
