Solar Photovoltaics Engineering. A Power Quality

Analysis Using Matlab Simulation Case Studies Akhil Gupta,2016-10 The solar Photovoltaic PV technology is gaining significant levels and is going to contribute a major share of total generated electricity in the coming years PV technology is becoming a promising alternative source for fossil fuels However Power Quality PQ is the major concern that occurs between the grid and an end user Any typical electrical distribution system exhibits a passive characteristic with respect to power flows when power flows from a substation to load However with inclusion of solar PV generators this behaviour tends to be changed The main characteristics related to PQ such as voltage level frequency power factor and Total Harmonic Distortion THD may be affected This book presents the analysis of PQ with the integration of grid connected PV systems as distributed generation The role of Maximum Power Point Tracking MPPT technique is investigated through implementing few basic

MPPT techniques Using the Matlab simulation platform the analysis of PQ is demonstrated This analysis is based on real measurements of THD Voltage levels Current levels DC voltage levels real power and reactive power flows **International Conference on Frontiers of Energy, Environmental Materials and Civil Engineering (FEEMCE 2013)** Roger D.
