Congress. House. Committee on Science, Space, and Technology. Subcommittee on Energy Research and Development, 1989 *The Science of Financial Market Trading* Don K. Mak, 2003 In

this book Dr Mak views the financial market from a scientific perspective The book attempts to provide a realistic description of what the market is and how future research should be developed The market is a complex phenomenon and can be forecasted only with errors if that particular market can be forecasted at all The book reviews the scientific literatures on the financial market and describes mathematical procedures which demonstrate that some markets are non random How the markets are modeled phenomenologically and from first principle is explained It discusses indicators which are quite objective rather than price patterns which are rather subjective Similarities between indicators in market trading and operators in mathematics are noted and particularly between oscillator indicators and derivatives in Calculus It illustrates why some indicators e g Stochastics have limited usage Several new indicators are designed and tested on theoretical waveforms to check their validity and applicability The indicators have a minimal time lag which is significant for trading purposes Common market behaviors like divergences between price and momentum are explained A skipped convolution technique is introduced to allow traders to pick up market movements at an earlier time The market is treated as a nonlinear phenomenon Forecasting of when the market is going to turn is emphasized
