lymph nodes Research in animals and in humans has revealed that B and T cells are involved in the progression of neurological diseases It has been showed that under particular conditions T cells establish themselves and become resident in the brain TRM cells from where they can either exert beneficial or detrimental effects on brain function Amazing efforts have been made to further comprehend interactions between brain specific cells and peripheral immune cells and especially their roles and impact on the onset progression and eventual resolution of diverse brain pathologies      **Journal of the Physical Society of Japan** ,2014
