The Climate Crisis And Its Solution An Energy Transformation:

The Climate Crisis and Its Solution: an Energy Transformation Robert Fraser, 2013-02-08 Based on temperature records ice cores and atmospheric physics and chemistry the evidence is overwhelming that we are in the midst of a climate crisis due to the increasing accumulation of greenhouse gases Nearly every climate scientist is in agreement that the increase in these gases over the last 250 years most of it over the last 50 years is mainly the result of fossil fuel use and to a lesser extent the result of altered land management Some of the impacts we are already seeing include historic heat waves increasing drought and wildfires severe storms and rising sea levels In *The Climate Crisis and its Solution* Robert Fraser gives a brief introduction to the science of climate change including an explanation of how and why we know that the accumulation of greenhouse gases like carbon dioxide is leading to global warming and other impacts on our climate and oceans He then describes some of the energy paths the world could take in the next century and how each will impact global warming He shows that only the low carbon energy paths will avoid the worst effects of climate change Fraser also suggests actions that individuals businesses and governments can take to implement the low carbon strategy Fortunately this is often considerably less expensive than following the higher carbon alternatives

Climate Crisis and Sustainable Solutions Narpinder Singh, S. Ananda Babu, 2024-11-26 This contributed volume dives into the critical intersection of climate adaptation vulnerability to hazards and the imperative of decarbonization in fortifying global food and nutritional security This comprehensive exploration aims to shed light on the challenges our food systems face in the wake of climate change and the strategies required to ensure resilience and sustainability In the face of escalating climate challenges securing sustenance demands a comprehensive approach Climate adaptation becomes paramount as agricultural systems struggle with increased vulnerabilities to various hazards From extreme weather events to shifting precipitation patterns the agricultural landscape is under constant threat The decarbonization imperative emerges as a critical strategy addressing the dual goals of mitigating climate change and enhancing food and nutritional resilience By reducing carbon emissions and transitioning to sustainable practices we not only contribute to global climate goals but also fortify food systems against environmental shocks This integrated approach acknowledges the intricate connections between climate agriculture and nutrition emphasizing the urgency of concerted efforts to ensure a resilient and sustainable future for food production and consumption This book includes in depth case studies from different regions showcasing the diverse impacts of climate change on food systems This book will integrate insights from multiple disciplines such as environmental science agriculture policy studies and community engagement providing a more holistic understanding of the issues at hand It will serve as a valuable resource for students researchers and practitioners seeking in depth knowledge on these interconnected topics

Energy Transition Jens Lowitzsch, 2019-01-09 Consumer co ownership in renewable energy RE is essential to the overall success of Energy Transition In June 2018 the European Union agreed on a corresponding enabling framework as part of a

recast of the Renewable Energy Directive RED II The transposition of these comprehensive rules in particular those on local RE communities requires developing implementing and rolling out business models that broaden the capital participation of consumers The challenge is to include municipalities and or commercial investors like SMEs and advance to economies of scale while retaining the benefits of individual consumer participation This book is addressed to energy consumers in local communities their municipalities and to the policy makers who represent them Additionally non EU countries in particular those where rural areas have limited access to energy e g in Asia Africa and Latin America may be interested in the benefits of consumer ownership While demand for energy in developing countries is growing access to energy is crucial for improving the quality of life The editor of this book presents a new model of consumer ownership in RE for both the EU and countries worldwide Part One describes the rationale for consumer ownership in RE with regard to social organizational legal and financial conditions Part Two discusses the issue of financing RE and introduces a new financing technique the Consumer Stock Ownership Plan CSOP comparing it to traditional models Part Three provides 18 country studies from Europe North America South America and Asia organized so as to enable a cross country comparison of policy approaches and feasibility Policy recommendations are based on the results of this survey Part Four summarizes compares the best practice cases presents a cost benefit analysis of prosumage and against this background evaluates the impact on future policy

Principles of International Energy Transition Law Frédéric G. Sourgens, Leonardo Sempertegui, 2023-10-04 Energy transition is a complex global problem with governance and policies cutting across multiple legal silos including human rights environment international economics finance energy law of the sea and transnational commerce As of yet there is no comprehensive treatment of the legal principles governing energy transition as a whole Furthermore energy transition must solve a trilemma that pits energy equity the need to provide access to energy needed to fuel human development and energy security the need

to provide resilient and reliable energy systems against environmental sustainability Without a comprehensive understanding of these issues law and policy makers risk exacerbating rather than resolving the underlying problems Principles of International Energy Transition Law introduces the energy transition problem by situating the climate emergency in its broader energy and development context showing how global energy value chains are deeply enmeshed in and drive global economic and human development It combines the different legal perspectives in one consistent analysis by outlining their interactions and showing how they can be reconciled The book discusses thirty two international legal principles governing different aspects of the energy transition trilemma s three parts It then uses a commons governance perspective to propose a holistic approach to applying and balancing these different parts and their different legal principles Highlighted sections summarise the most important concepts and ideas for easy reference making the title particularly accessible for students and policy makers as well as law practitioners
