*Quality of Life in Epilepsy* Gus A Baker,Gus A. Baker,Ann Jacoby,2013-05-13 Though clinical aspects of epilepsy such as seizure control are crucially important to its management increasing attention is being given to wider quality of life issues Epilepsy continues to be an often misunderstood and stigmatising condition for the vast majority of people whose seizures can be well controlled the social and psychological repercussions are often of greater significance than the seizures themselves The increasing emphasis on the importance of non clinical outcomes in the assessment of new treatments and management strategies for chronic conditions such as epilepsy has stimulated interest in methodological issues in assessing quality of life This book reviews the recent literature on the impact of epilepsy on everyday experience and the methodological issues involved in assessing that impact It also considers the perspectives of a range of health professionals involved in caring for people with epilepsy and how through appropriate management the impact on their lives can be minimised

[Handbook on the Neuropsychology of Epilepsy](#) William B. Barr,Chris Morrison,2014-12-02 Once feared and misunderstood even among the medical community epilepsy has since largely been demystified Besides the characteristic seizures various cognitive behavioral and emotional difficulties are recognized as associated with the condition and patients are finding relief in medical management and or surgical intervention Not surprisingly neuropsychology has emerged as a major component in treatment planning program development and assessment of surgical candidates Geared toward beginning as well as veteran clinicians the Handbook on the Neuropsychology of Epilepsy offers readers a skills based framework for assessment and treatment using current evidence and standardized terminology Expert coverage reviews widely used methods for evaluating key aspects of patient functioning MRI MEG electrocortical mapping the Wada test and presents guidelines for psychotherapeutic and cognitive remediation strategies in treating comorbid psychiatric conditions Given the diversity of the patient population additional chapters spotlight issues specific to subgroups including high and low functioning as well as geriatric and pediatric patients

**Comprehensive Care for People with Epilepsy** Margarete Pfäfflin,2001 Describes an approach to diagnosing and treating people with epilepsy though not confined to this condition with a view of the patient as an integral human being comprising both their seizures and the psychical and social situation This book inquires into every treatment s goals whilst including the patients and their relatives subjective evaluations and perspectives This includes early considerations of benefits versus risks for the patient the ultimate question being what quality of life will be attained and how much independent life and employment will be feasible Comprehensive Care does not necessarily need to be associated with elevated cost as many epilepsy centres have enough knowledge imagination and staff for this purpose the problem being how to combine and use existing resources most effectively
