System Identification Torsten Söderström, Petre Stoica, 1989 A textbook designed for senior undergraduate and graduate level classroom courses on system identification Examples and problems Annotation copyrighted by Book News Inc Portland OR Journal A, 1990 **Latent Variable Analysis and Signal Separation** Emmanuel Vincent, Arie Yeredor, Zbyněk Koldovský, Petr Tichavský, 2015-08-14 This book constitutes the proceedings of the 12th International Conference on Latent Variable Analysis and Signal Separation LVA ICS 2015 held in Liberec Czech Republic in August 2015 The 61 revised full papers presented 29 accepted as oral presentations and 32 accepted as poster presentations were carefully reviewed and selected from numerous submissions Five special topics are addressed tensor based methods for blind signal separation deep neural networks for supervised speech separation enhancement joint analysis of multiple datasets data fusion and related topics advances in nonlinear blind source separation sparse and low rank modeling for acoustic signal processing *Model-Based Signal Processing* James V. Candy, 2005-10-13 A unique treatment of signal processing using a model based perspective Signal processing is primarily aimed at extracting useful information while rejecting the extraneous from noisy data If signal levels are high then basic techniques can be applied However low signal levels require using the underlying physics to correct the problem causing these low levels and extracting the desired information Model based signal processing incorporates the physical phenomena measurements and noise in the form of mathematical models to solve this problem Not only does the approach enable signal processors to work directly in terms of the problem's physics instrumentation and uncertainties but it provides far superior performance over the standard techniques Model based signal processing is both a modeler's as well as a signal processor's tool Model Based Signal Processing develops the model based approach in a unified manner and follows it through the text in the algorithms examples applications and case studies The approach coupled with the hierarchy of physics based models that the author develops including linear as well as nonlinear representations makes it a unique contribution to the field of signal processing The text includes parametric e.g. autoregressive or all pole sinusoidal wave based and state space models as some of the model sets with its focus on how they may be used to solve signal processing problems Special features are provided that assist readers in understanding the material and learning how to apply their new knowledge to solving real life problems Unified treatment of well known signal processing models including physics based model sets Simple applications demonstrate how the model based approach works while detailed case studies demonstrate problem solutions in their entirety from concept to model development through simulation application to real data and detailed performance analysis Summaries provided with each chapter ensure that readers understand the key points needed to move forward in the text as well as MATLAB r Notes that describe the key commands and toolboxes readily available to perform the algorithms discussed References lead to more in depth coverage of specialized topics Problem sets test readers knowledge and help them put their new skills into practice The author

demonstrates how the basic idea of model based signal processing is a highly effective and natural way to solve both basic as well as complex processing problems Designed as a graduate level text this book is also essential reading for practicing signal processing professionals and scientists who will find the variety of case studies to be invaluable An Instructor s Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department
