

SS 101B LDA THREE 00102D

Calculate based on the starting address 1000

Reload the program starting at 1000

SS 101B LDA THREE 00302D

The absolute address should be modified

Example: Program Relocation

- The only parts of the program that require modification at load time are those that specify direct addresses.
- The rest of the instructions need not be modified.
 - Not a memory address (immediate addressing)
 - PC-relative, Base-relative
- From the object program, it is not possible to distinguish the address and constant.
 - The assembler must keep some information to tell the loader.
 - The object program that contains the modification record is called a relocatable program.

The way to solve the relocation problem

- For an address label, its address is assigned relative to the start of the program (START 0)
- Produce a Modification record to store the starting location and the length of the address field to be modified.
