Syntactic Wordclass Tagging Syntactic Wordclass Tagging:

Syntactic Wordclass Tagging H. van Halteren, 2013-03-14 In both the linguistic and the language engineering community the creation and use of annotated text collections or annotated corpora is currently a hot topic. Annotated texts are of interest for research as well as for the development of natural language processing NLP applications. Unfortunately the annotation of text material, especially more interesting linguistic annotation, is as yet a difficult task and can entail a substantial amount of human involvement. All over the world work is being done to replace as much as possible of this human effort by computer processing. At the frontier of what can already be done mostly automatically we find syntactic wordclass tagging: the annotation of the individual words in a text with an indication of their morpho-syntactic classification. This book describes the state of the art in syntactic wordclass tagging. As an attempt to give an overall view of the field, this book is of interest to at least two possibly very different types of reader. The first type consists of those people who are using or are planning to use tagged material and taggers. They will want to know what the possibilities and impossibilities of tagging are but are not necessarily interested in the internal working of automatic taggers. This, on the other hand, is the main interest of our second type of reader: the builders of automatic taggers and other natural language processing software. **The Oxford Handbook**

of Word Classes Eva van Lier, 2023 This handbook explores multiple facets of the study of word classes, also known as parts of speech or lexical categories. The contributions showcase the importance of word classes for the whole discipline of linguistics while also highlighting the many ongoing debates in the areas and outlining fruitful avenues for future research.

Pattern Recognition and Image Analysis Joan Martí, José M. Benedí, Ana M. Mendonça, Joan Serrat, 2007-07-04 Part of a two-volume set, this book constitutes the refereed proceedings of the Third Iberian Conference on Pattern Recognition and Image Analysis, IbPRIA 2007, held in Girona, Spain, in June 2007. It covers pattern recognition, human language technology, special architectures, and industrial applications, motion analysis, image analysis, biomedical applications, shape and texture analysis, 3D and image coding and processing. Encyclopedia of Computer Science and Technology Allen Kent, James G.

Williams, 2002-01-02 This supplement to the Encyclopedia of Computer Science and Technology looks at subjects ranging from algorithmic learning theory to statistical language modelling. **WordNet** Christiane Fellbaum, 1998 WordNet, an electronic lexical database, is considered to be the most important resource available to researchers in computational linguistics, text analysis, and many related areas. English nouns, verbs, adjectives, and adverbs are organized into synonym sets, each representing one underlying lexicalized concept. Different relations link the synonym sets. The purpose of this volume is twofold. First, it discusses the design of WordNet and the theoretical motivations behind it. Second, it provides a survey of representative applications, including word sense identification, information retrieval, selectional preferences of verbs, and lexical chains. **Intelligent Information Processing and Web Mining** Mieczysław A. Kłopotek, Sławomir T.

Wierzchón, Krzysztof Trojanowski, 2013-06-05 This volume contains articles accepted for presentation during The Intelligent

Information Processing and Web Mining Conference IIS IIPWM 04 which was held in Zakopane Poland on May 17 20 2004 This conference is a continuation of a series of 13 successful symposia and conferences on Intelligent Information Systems organized by the Institute of Computer Science of Polish Academy of Sciences devoted to new trends in broadly understood Artificial Intelligence The idea of organizing such meetings dates back to 1992 Our main intention guided the first rather small audience workshop in the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators This idea proved to be attractive enough that we decided to continue such meetings As the years went by the workshops has transformed into regular symposia devoted to such fields like Machine Learning Knowledge Discovery Natural Language Processing Knowledge Based Systems and Reasoning and Soft Computing i e Fuzzy and Rough Sets Bayesian Networks Neural Networks and Evolutionary Algorithms At present about 50 papers prepared by researchers from Poland and other countries are usually presented This year conference devotes much more attention to the newest developments in the area of Artificial Intelligence related to broadly understood Web mining

Memory-Based Language Processing

Walter Daelemans, Antal van den Bosch, 2005-09-01 Memory based language processing a machine learning and problem solving method for language technology is based on the idea that the direct reuse of examples using analogical reasoning is more suited for solving language processing problems than the application of rules extracted from those examples This book discusses the theory and practice of memory based language processing showing its comparative strengths over alternative methods of language modelling Language is complex with few generalizations many sub regularities and exceptions and the advantage of memory based language processing is that it does not abstract away from this valuable low frequency information By applying the model to a range of benchmark problems the authors show that for linguistic areas ranging from phonology to semantics it produces excellent results They also describe TiMBL a software package for memory based language processing The first comprehensive overview of the approach this book will be invaluable for computational linguists psycholinguists and language engineers

Corpus Linguistics. Volume 1 Anke Lüdeling, Merja Kytö, 2008-12-10

This volume provides an up to date survey of the field of corpus linguistics a field whose methodology has revolutionized much of the empirical work done in most fields of linguistic study over the past decade Corpus linguistics investigates human language by starting out from large collections of texts spoken written or recorded These language corpora which are now regularly available in electronic form are the basis for quantitative and qualitative research on almost any question of linguistic interest Many techniques that are in use in corpus linguistics today are rooted in the tradition of the late 18th and 19th century when linguistics began to make use of mathematical and empirical methods Modern corpus linguistics has used and developed these methods in close connection with computer science and computational linguistics The handbook sketches the history of corpus linguistics shows its potential discusses its problems and describes various methods of

collecting annotating and searching corpora as well as processing corpus data It also reports case studies that illustrate the wide range of linguistic research questions addressed in corpus linguistics The over 60 articles included in the handbook are divided into five sections 1 the origins and history of corpus linguistics and surveys of its relationship to central fields of linguistics 2 corpus compilation 3 corpus types 4 preprocessing of corpora 5 the use and exploitation of corpora The final section gives an overview of the results of corpus studies obtained in phonetics phonology morphology syntax semantics sociolinguistics historical linguistics stylometry dialectology and discourse analysis It also reports on recent advances made in human and machine translation contrastive studies computer assisted language learning and automatic summarization The contributors to the volume are internationally known experts in their respective fields The handbook is intended for a wide audience ranging from teachers university students and scholars to anyone interested in the use of computers in linguistic analyses and applications

Corpus-Based Computational Linguistics, 2023-11-27 The new media revolution has led to a comprehensive digitization of our textual universe and the pervasive incorporation of the media into our everyday lives from mobile telephony to social media This calls for a concerted research effort uniting linguistics and other disciplines involved in language related research The massive growth in the amount diversity and availability of textual and multimodal language data for many of the world's languages poses several challenges In terms of theory and methods it forces us to rethink traditional notions of what linguistic corpora are and what role they play in linguistic description Established corpus linguistic methods such as concordancing and textual statistics are increasingly being complemented by visualization and geolocation of digital language data Empirically there is a growing need to document and analyse what people do with language in the increasingly technologized communicative ecology of the 21st century Language and Computers Studies in Digital Linguistics invites contributions which explore innovative intelligent and creative ways of using digital language data resources and infrastructure for linguistic description contribute to the development and refinement of usage based models in linguistics using both quantitative and qualitative methods analyse all aspects of digitally mediated communication from orthography to pragmatics and sociolinguistics

Exploring Natural Language Gerald Nelson, Sean Wallis, Bas Aarts, 2002-06-27 ICE GB is a 1 million word corpus of contemporary British English It is fully parsed and contains over 83 000 syntactic trees Together with the dedicated retrieval software ICECUP ICE GB is an unprecedented resource for the study of English syntax Exploring Natural Language is a comprehensive guide to both corpus and software It contains a full reference for ICE GB The chapters on ICECUP provide complete instructions on the use of the many features of the software including concordancing lexical and grammatical searches sociolinguistic queries random sampling and searching for syntactic structures using ICECUP's Fuzzy Tree Fragment models Special attention is given to the principles of experimental design in a parsed corpus Six case studies provide step by step illustrations of how the corpus and software can be used to explore real linguistic issues from simple lexical studies to more complex syntactic topics such as noun phrase structure verb
