Testimonials

As the systems that modern society depends on get more complicated and complex, we are in the midst of a renaissance with regard to research relating to systems engineering and science. A vast majority of this research is focused on the development of a modern toolkit for systems engineers today and into the future. This takes the form of new and improved methods, models, methodology, processes, and tools. This research is critical but likely insufficient without a focus on the most valuable resource with regard to systems engineering within any organization: the human resource. Therein lies the focus of this textbook. It addresses systems engineering leadership from a variety of perspectives while also addressing broad aspects relating to mentoring and the necessary evolving competencies that we need to address in today's workforce. This emphasis makes this book unique. The icing on the cake is that all the chapters in this textbook are written by contemporary women leaders; this provides a necessary and unique perspective on the topic of leadership that is long overdue. I highly recommend this textbook to all my colleagues in academia, industry, and government.
