Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain      **Living with AI: Practical Tools for**

**Beginners** Jeffery Long, 2024-08-23 Living with AI Practical Tools for Beginners Chapter 1 Introduction to AI Artificial Intelligence commonly referred to as AI is a branch of computer science that focuses on creating systems capable of performing tasks that would typically require human intelligence These tasks include problem solving understanding natural language recognizing patterns and making decisions At its core AI aims to develop machines that can mimic cognitive functions associated with the human mind This technology has evolved over the decades transitioning from theoretical concepts to practical applications that impact our daily lives One of the fundamental building blocks of AI is machine learning which allows computers to learn from data and improve their performance over time without being explicitly programmed This process involves feeding large amounts of data into algorithms which then identify patterns and make predictions based on that information For instance recommendation systems on streaming platforms analyze user behavior to suggest movies or shows that align with individual preferences This capability underscores how AI can enhance user experiences by personalizing interactions      **AI In Many Countries: Global Perspectives on Artificial Intelligence** Dizzy
