Spinner Template Seeds Primary:

On the Origin of life Dr I Pearson, 2025-09-15 This book proposes a bold new answer to one of science's oldest questions. Instead of starting with random chemistry, *On the Origin of Life* shows how living systems could have begun with deterministic field structures built from protons, electrons, and neutrinos through mechanisms described by Stein Theory. These simple geometric rules of spin alignment and corridor formation created stable feedback loops, memory, and responsiveness long before DNA, proteins, or cells existed. The book traces life's journey from invisible neutrino-based dark life through rock-bound Darwinian chemistry and droplet proto-cells into the rise of membranes, DNA, and organisms. It demonstrates how many of these early processes remain embedded in modern biology and how understanding them opens new possibilities in medicine, synthetic biology, and the search for life in the universe.

Biology Explained Dr I Pearson, 2025-09-12 *Biology Explained* provides a clear deterministic explanation of life, health, and disease built from Stein Theory's first principles. Inside, you'll discover Life's fundamental engine: how proton face-lock corridors and oscillation pumps power biology at the femtometre scale. Cellular health as geometry: why corridor collapse leads to cancer, ageing, and neurodegeneration, and how early intervention could prevent them. Reset and repair mechanisms: a blueprint for restoring healthy corridor networks before irreversible damage occurs. Applied medicine: ideas for next-generation cancer prevention, regenerative medicine, and real-time bio-structural monitoring.

The Best Ways to Teach Primary Science: Research into Practice Michael Allen, 2016-07-16 This book provides an exceptional insight into how children learn science as well as which teaching approaches have been found to be most successful. Drawing on the significant body of research carried out over the past 35 years, the book provides valuable evidence about which tried and tested approaches enhance learning and help children actually learn science. The book supports you in becoming more effective in teaching primary science, offers a reliable evidential base founded on significant research findings, helps you make informed choices about which approaches to use in your teaching repertoire, provides support for completing your written assignments. Overall, the text helps you develop your knowledge and understanding of primary science as well as how best to plan for teaching this important subject. Insights into how children best learn science together with practical teaching ideas that have been tested in a systematic way makes this an essential book for primary teachers in training and an invaluable guide for primary teachers teaching science in Key Stages One and Two. This book makes a major evidence-based contribution to teaching science in the primary school. It provides a solid grounding for busy teachers to access and use research findings to enhance their professional development and practice. Each chapter provides comprehensive coverage of a science topic, including revision of subject knowledge, research findings on children's ideas, learning progression, suggested ways to teach, and research exemplars and lesson outlines. This book is a valuable resource for student teachers and for teachers with many years of experience. It is an indispensable addition to every primary teacher's bookshelf and every university education department. Rob Toplis recently

Senior Lecturer in Science Education Brunel University UK This is a great why to and how to book Michael Allen's use of progressive understanding underscores both the unfolding stories of primary science alongside children's developing grasp of the key ideas involved His work is based on a wealth of research that provides the basis for the why to in curriculum organisation and planning This is then brought to bear on considerable professional experience and classroom practice to provide the how to for teachers covering a range of important topics in primary science An excellent compendium of rationales and resources Mike Watts Professor of Education Brunel University UK

Plant Genome Engineering Bing Yang, Wendy Harwood, Qiudeng Que, 2023-03-30 This volume provides readers with a collection of the latest protocols used to study plant genome editing and trait engineering The chapters in this book are organized into five parts genome engineering systems machinery design and validation delivery tools generation and analysis of engineering materials and crop genome engineering applications The chapters cover topics such as methods of applying the popular CRISPR Cas9 or CRISPR Cas12 systems for editing genomes in different crop species the use of small synthetic plastome for potato genome engineering and the use of CRISPR Cas9 for algal cell genome engineering Written in the highly successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Cutting edge and comprehensive Plant Genome Engineering Methods and Protocols is a valuable tool for researchers interested in learning more about this developing and important field

Biobased Industrial Products National Research Council, Commission on Life Sciences, Board on Biology, Committee on Biobased Industrial Products, 2000-02-16 Petroleum based industrial products have gradually replaced products derived from biological materials However biologically based products are making a comeback because of a threefold increase in farm productivity and new technologies Biobased Industrial Products envisions a biobased industrial future where starch will be used to make biopolymers and vegetable oils will become a routine component in lubricants and detergents Biobased Industrial Products overviews the U S land resources available for agricultural production summarizes plant materials currently produced and describes prospects for increasing varieties and yields The committee discusses the concept of the biorefinery and outlines proven and potential thermal mechanical and chemical technologies for conversion of natural resources to industrial applications The committee also illustrates the developmental dynamics of biobased products through existing examples as well as products still on the drawing board and it identifies priorities for research and development

Neural Implementations of Expertise Merim Bilalić, Robert Langner, Guillermo Campitelli, Luca Turella, Wolfgang Grodd, 2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such

as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects

The Anglicization of European Lexis Cristiano Furiassi, Virginia Pulcini, Félix Rodríguez González, 2012 This volume explores the lexical influence of English on European languages a topical theme with linguistic and cultural implications It provides an extensive introductory background to a cross national view of English induced lexical borrowing posing crucial analytical questions such as what counts as an Anglicism It also offers a typology of borrowings with examples from the languages represented Armenian Danish French German Italian Norwegian Polish Serbian Spanish and Swedish The articles in this volume address general and language specific issues related to the analysis and collection of Anglicisms extending the scope to the largely unexplored area of phraseology and bringing new insights into corpus based and corpus driven methodologies This volume fits into a well established and constantly developing research field and will appeal to scholars interested in the spread of English as an international language contact and contrastive linguistics lexicology and lexicography and computer corpus lexicography
