Geochemical Modeling for Mine Site Characterization and Remediation D. Kirk Nordstrom, Andrew Nicholson, 2017-10-01

The single most important factor for the successful application of a geochemical model is the knowledge and experience of the individual s conducting the modeling Geochemical Modeling for Mine Site Characterization and Remediation is the fourth of six volumes in the Management Technologies for Metal Mining Influenced Water series about technologies for management of metal mine and metallurgical process drainage This handbook describes the important components of hydrogeochemical modeling for mine environments primarily those mines where sulfide minerals are present metal mines and coal mines It provides general guidelines on the strengths and limitations of geochemical modeling and an overview of its application to the hydrogeochemistry of both unmined mineralized sites and those contaminated from mineral extraction and mineral processing The handbook includes an overview of the models behind the codes explains vital geochemical computations describes several modeling processes provides a compilation of codes and gives examples of their application including both successes and failures Hydrologic modeling is also included because mining contaminants most often migrate by surface water and groundwater transport and contaminant concentrations are a function of water residence time as well as pathways This is an indispensable resource for mine planners and engineers environmental managers land managers consultants researchers government regulators nongovernmental organizations students stakeholders and anyone with an interest in mining influenced water The other handbooks in the series are Basics of Metal Mining Influenced Water Mitigation of Metal Mining Influenced Water Mine Pit Lakes Characteristics Predictive Modeling and Sustainability Techniques for Predicting Metal Mining Influenced Water and Sampling and Monitoring for the Mine Life Cycle *Applied Groundwater Modeling* Mary P. Anderson, William W. Woessner, Randall J. Hunt, 2015-08-13 This second edition is extensively revised throughout with expanded discussion of modeling fundamentals and coverage of advances in model calibration and uncertainty analysis that are revolutionizing the science of groundwater modeling The text is intended for undergraduate and graduate level courses in applied groundwater modeling and as a comprehensive reference for environmental consultants and scientists engineers in industry and governmental agencies Explains how to formulate a conceptual model of a

groundwater system and translate it into a numerical model Demonstrates how modeling concepts including boundary conditions are implemented in two groundwater flow codes MODFLOW for finite differences and FEFLOW for finite elements Discusses particle tracking methods and codes for flowpath analysis and advective transport of contaminants Summarizes parameter estimation and uncertainty analysis approaches using the code PEST to illustrate how concepts are implemented Discusses modeling ethics and preparation of the modeling report Includes Boxes that amplify and supplement topics covered in the text Each chapter presents lists of common modeling errors and problem sets that illustrate concepts
