American Mathematical Monthly *The Art of Mathematics South Asian Edition* Bollobas,2011-04-28 **An Invitation to**

Mathematics Dierk Schleicher, Malte Lackmann, 2011-05-19 This Invitation to Mathematics consists of 14 contributions many from the world's leading mathematicians which introduce the readers to exciting aspects of current mathematical research. The contributions are as varied as the personalities of active mathematicians but together they show mathematics as a rich and lively field of research. The contributions are written for interested students at the age of transition between high school and university who know high school mathematics and perhaps competition mathematics and who want to find out what current research mathematics is about. We hope that it will also be of interest to teachers or more advanced mathematicians who would like to learn about exciting aspects of mathematics outside of their own work or specialization. Together with a team of young test readers, editors and authors have taken great care through a substantial active editing process to make the contributions understandable by the intended readership. **Handbook of Mathematical Induction**

David S. Gunderson, 2014-01-09 Handbook of Mathematical Induction Theory and Applications shows how to find and write proofs via mathematical induction. This comprehensive book covers the theory, the structure of the written proof, all standard exercises and hundreds of application examples from nearly every area of mathematics. In the first part of the book the author discusses *Mathematical Bridges* Titu Andreescu, Cristinel Mortici, Marian Tetiva, 2017-02-17 Building bridges

between classical results and contemporary nonstandard problems, this highly relevant work embraces important topics in analysis and algebra from a problem-solving perspective. The book is structured to assist the reader in formulating and proving conjectures as well as devising solutions to important mathematical problems by making connections between various concepts and ideas from different areas of mathematics. Instructors and motivated mathematics students from high school juniors to college seniors will find the work a useful resource in calculus, linear and abstract algebra, analysis and differential equations. Students with an interest in mathematics competitions must have this book in their personal libraries.
