Slip Power Recovery in an Induction Motor by the Use of a Thyristor Inveter W. Shepherd,1966 *Analysis of Hardware Implementation and Speed Control of a Slip Energy Recovery System* ,1995 This thesis involves the construction and testing of a Slip Energy Recovery System SERS The principle component of the SERS is a wound rotor induction machine which allows for extraction of slip power from the rotor which in turn provides a means of speed control Induction machines normally operate at a constant speed but SERS offers a method of speed control which increases efficiency by returning the slip power back to the system In this research effort various tests required to analyze speed range signal waveforms and power flow were conducted Additionally an analog and a microprocessor based control scheme were implemented for speed control A number of studies are presented to validate and contrast the proposed circuits The system data collected during validation studies are compared against the theoretical Operation of the SERS After construction alternative topologies are investigated in order to assess the configuration that provides an optimal speed range A baseline was established and it is shown that the location of the transformer in the SERS has a significant influence on the speed range Results from further testing of the baseline configuration revealed that in regards to waveforms and power flow the system responded as expected **Energy-saving Principles and Technologies for Induction Motors** Wenzhong Ma,Lianping Bai,2018-02-12 A unique guide to the integration of three phase induction motors with the emphasis on conserving energy The energy saving principle and technology for induction motor is a new topic and there are few books currently available this book provides a guide to the technology and aims to bringabout significant advancement in research and play an important role in improving the level of motor energy saving Includes new and innovative topics such as a case study of energy saving in beam pumping system and reactive compensation as a means of energy saving The authors have worked in this area for 20 years and this book is the result of their accumulated research and expertise It is unique in its integration of three phase induction motors with the emphasis on conserving energy Integrates the saving energy principle technology and method of induction motors with on site experiences showing readers how to meet the practical needs and to apply the theory into practice It also provides case studies and analysis which can help solve problems on site **Condition Monitoring and Faults Diagnosis of Induction Motors** Nordin Saad,Muhammad Irfan,Rosdiazli Ibrahim,2018-07-11 The book covers various issues related to machinery condition monitoring signal processing and conditioning instrumentation and measurements faults for induction motors failures new trends in condition monitoring and the fault identification process using motor currents electrical signature analysis It aims to present a new non invasive and non intrusive condition

monitoring system which has the capability to detect various defects in induction motor at incipient stages within an arbitrary noise conditions The performance of the developed system has been analyzed theoretically and experimentally under various loading conditions of the motor Covers current and new approaches applied to fault diagnosis and condition monitoring Integrates concepts and practical implementation of electrical signature analysis Utilizes LabVIEW tool for condition monitoring problems Incorporates real world case studies Paves way a technology potentially for prescriptive maintenance via IIoT
