Remote Backup and Restore

Remote backup and restore provides the ability to perform system database backups to a remote server via File Transfer Protocol (FTP). Additionally, the feature enables the system to recover/restore its database by recovering its image from a remote server.

The remote backup feature enables users to perform backups remotely without removable media. A remote backup can be performed manually or at regularly scheduled intervals via craft commands. The remote restore feature provides an additional

Tellabs 5320L/S Digital Cross-Connect Feature Package 7.1.1

configured for disaster recovery and can be performed via craft commands in case of a system failure without the need for removable media.

Enhanced AIS

The enhanced AIS signaling feature enables users to configure ports on a network port basis. When an NPC is removed from service, all cross-connected DS-D channels within the removed NPC source an FF Alarm Indication Signal (AIS). Also, all non-cross-connected DS-Cs within the removed NPC source a FF idle-code signal toward the facility.

This feature enhances facility loop-back functionality. An NPC configured for enhanced AIS sends AIS to the far end and when it is configured for a facility loop-back.

NPC Relationship Alarming

NPC relationship alarming enables users to logically associate two NPCs so that when one NPC goes into carrier group alarm (CGA), the other associated NPC automatically transmits AIS.

Users can take advantage of this functionality to generate an alert on a facility when another logically associated facility goes into an alarm condition.
